Supplemental Data

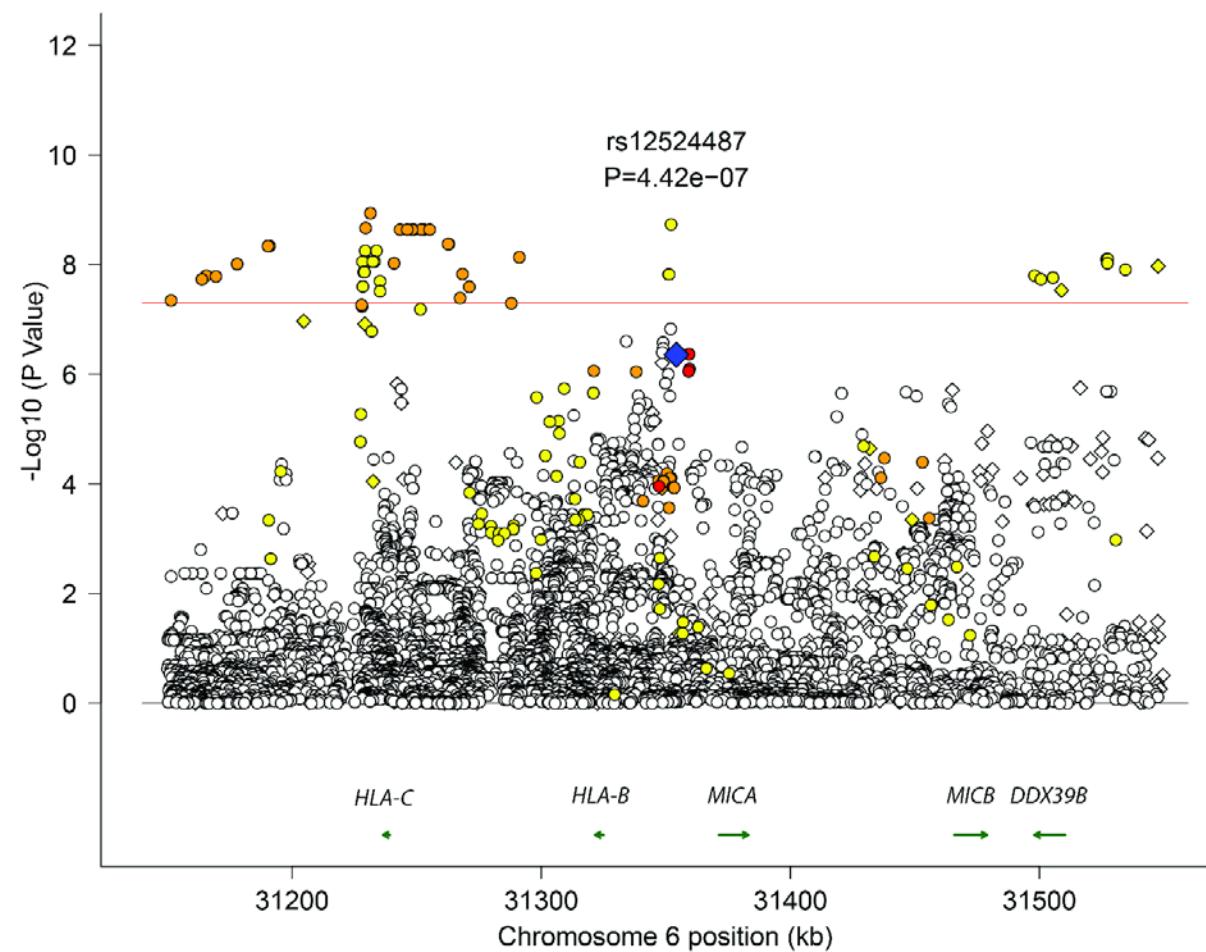

Identification of Multiple Genetic

Susceptibility Loci in Takayasu Arteritis

Güher Saruhan-Direskeneli, Travis Hughes, Kenan Aksu, Gokhan Keser, Patrick Coit, Sibel Z. Aydin, Fatma Alibaz-Oner, Sevil Kamali, Murat Inanc, Simon Carette, Gary S. Hoffman, Servet Akar, Fatos Onen, Nurullah Akkoc, Nader A. Khalidi, Curry Koenig, Omer Karadag, Sedat Kiraz, Carol A. Langford, Carol A. McAlear, Zeynep Ozbalan, Askin Ates, Yasar Karaaslan, Kathleen Maksimowicz-McKinnon, Paul A. Monach, Hüseyin TE Ozer, Emire Seyahi, Izzet Fresko, Ayse Cefle, Philip Seo, Kenneth J. Warrington, Mehmet A. Ozturk, Steven R. Ytterberg, Veli Cobankara, A. Mesut Onat, Joel M. Guthridge, Judith A. James, Ercan Tunc, Nurşen Duzgun, Muge Bıçakçıgil, Sibel P. Yentür, Peter A. Merkel, Haner Direskeneli, and Amr H. Sawalha

Figure S1: Regional plots showing genetic association results in the Turkish cohort in the *HLA-B/MICA* locus (A), and the *HLA-DQB1/HLA-DRB1* locus (B). Genotyped and imputed variants are depicted with diamond-shaped symbols and circles, respectively. The colors represent r^2 values with the index SNP in each locus (white, $r^2 < 0.2$; yellow, $r^2 \geq 0.2 - 0.5$; orange, $r^2 \geq 0.5 - 0.8$; red, $r^2 \geq 0.8$).

A

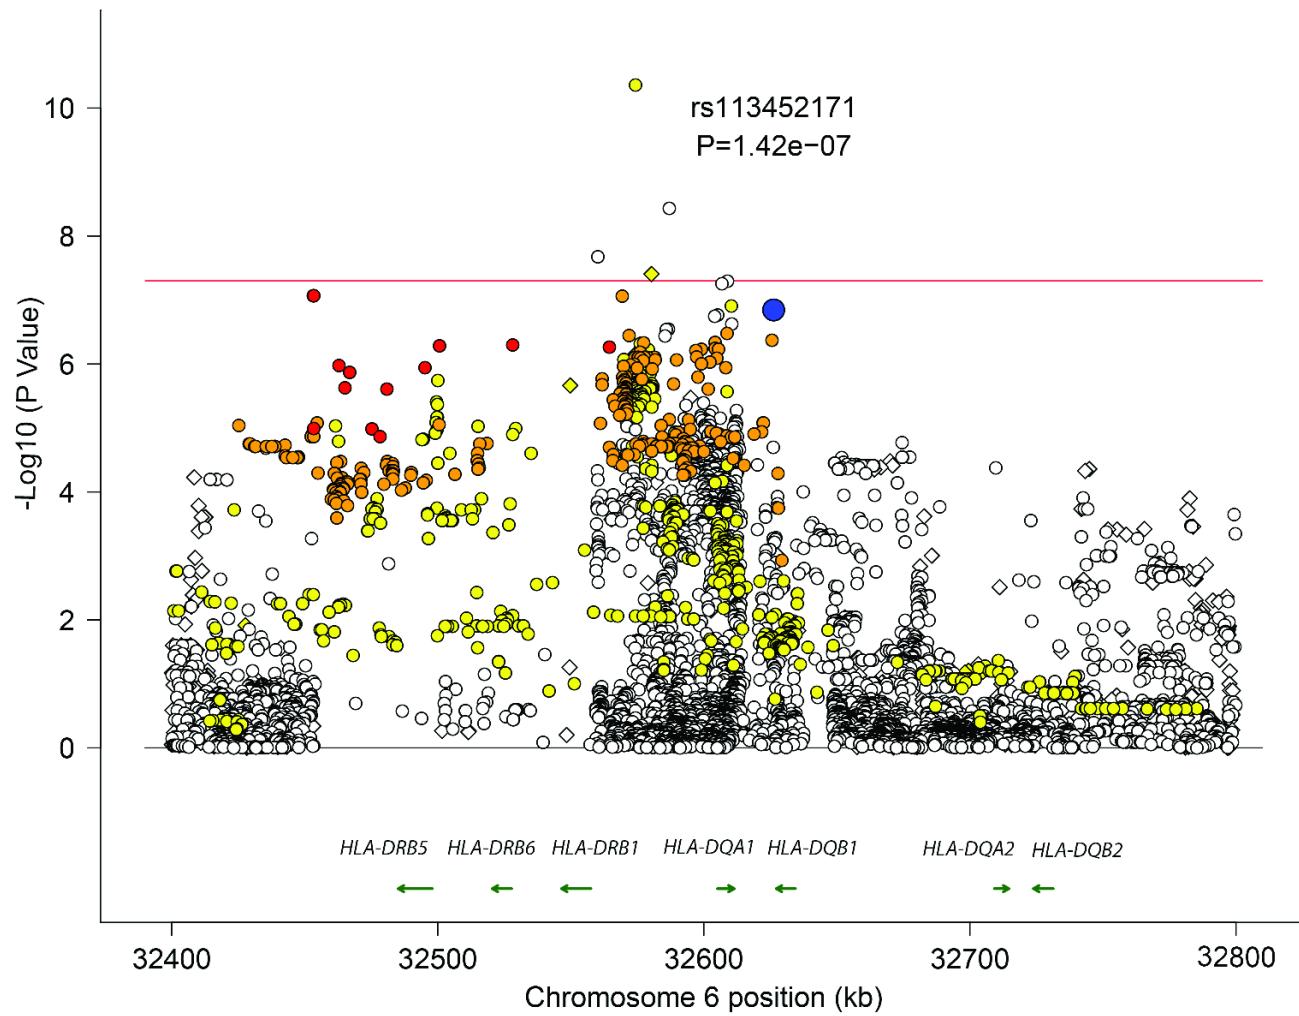

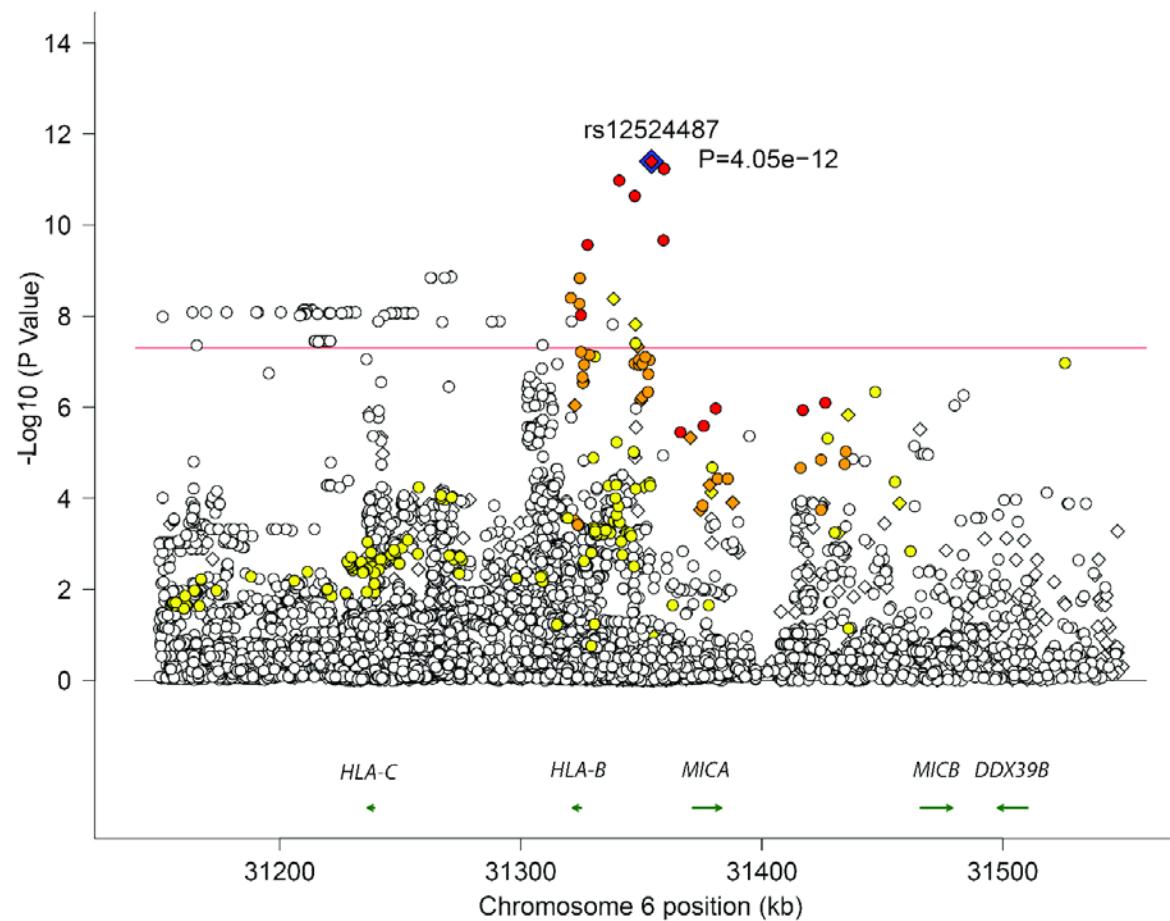

B

Figure S2: Regional plots showing genetic association results in the European-American cohort in the *HLA-B/MICA* locus (A), and the *HLA-DQB1/HLA-DRB1* locus (B). Genotyped and imputed variants are depicted with diamond-shaped symbols and circles, respectively. The colors represent r^2 values with the index SNP in each locus (white, $r^2 < 0.2$; yellow, $r^2 \geq 0.2 - 0.5$; orange, $r^2 \geq 0.5 - 0.8$; red, $r^2 \geq 0.8$).

A

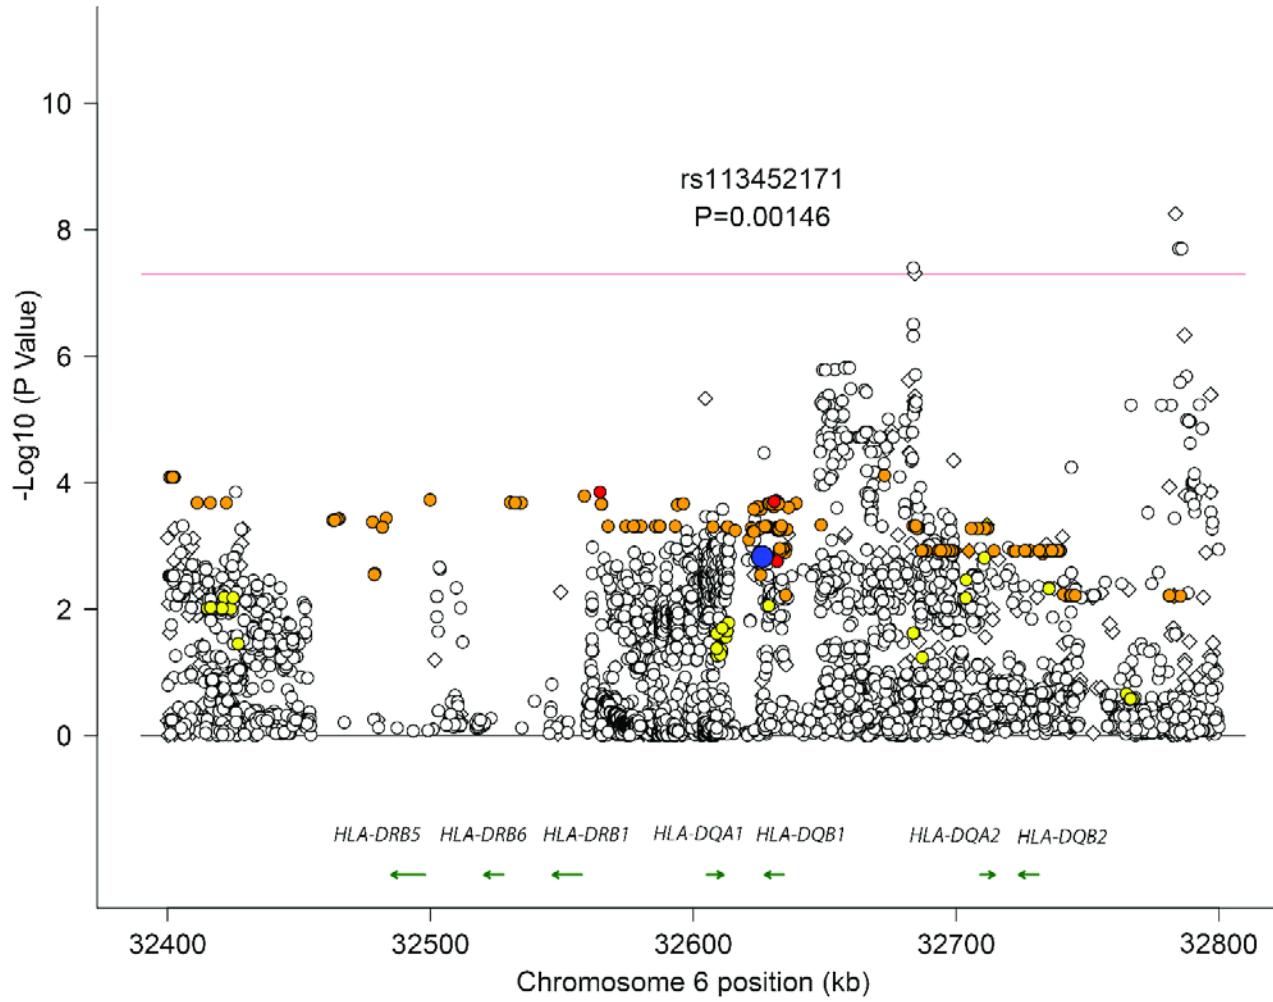

B

Figure S3: The Takayasu's arteritis associated variant in the *FCGR2A/FCGR3A* locus is associated with allele-specific expression difference in *FCGR2A*. The disease-associated allele in rs2099684 increases *FCGR2A* mRNA expression in lymphoblastoid cells ($P= 3 \times 10^{-4}$).

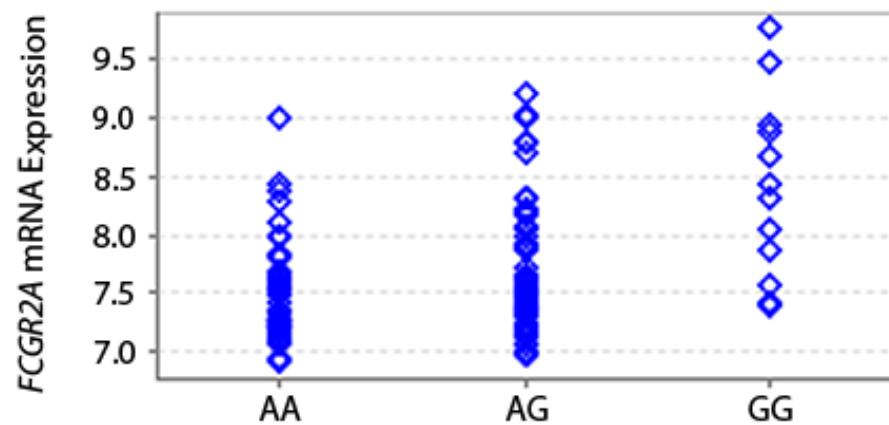

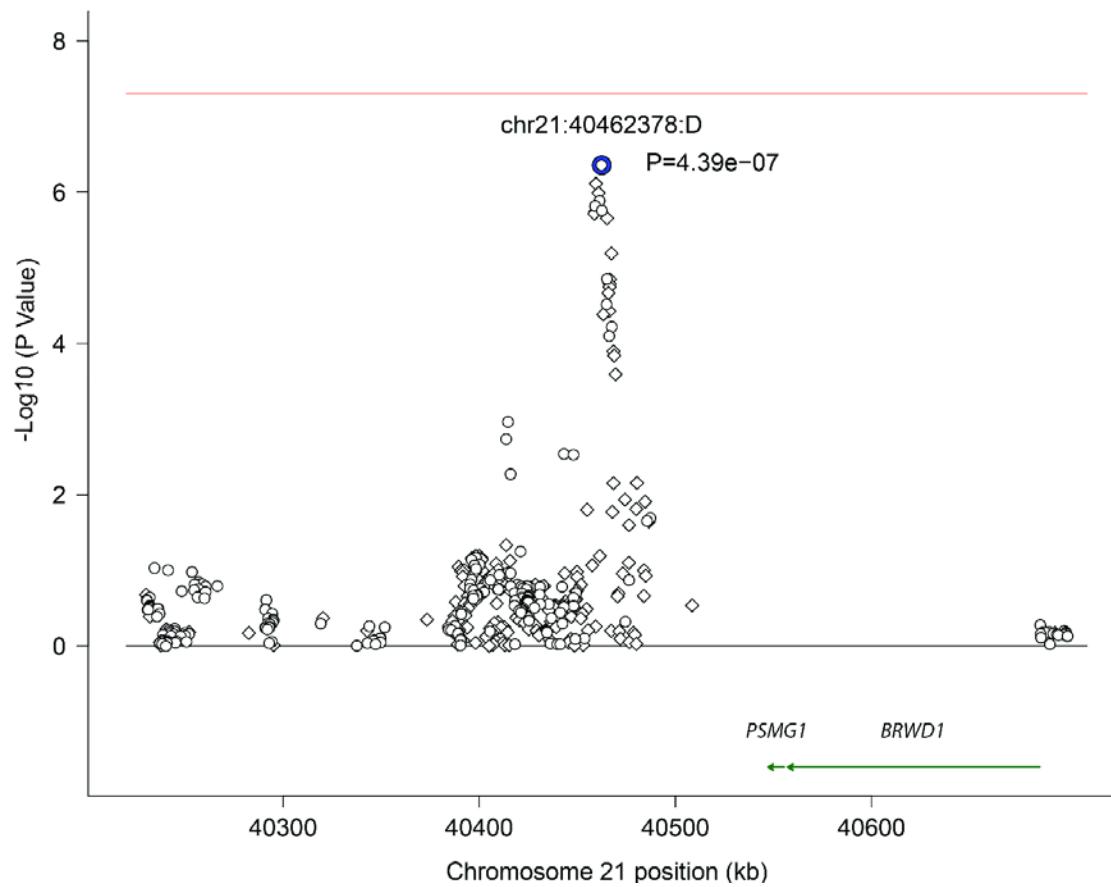

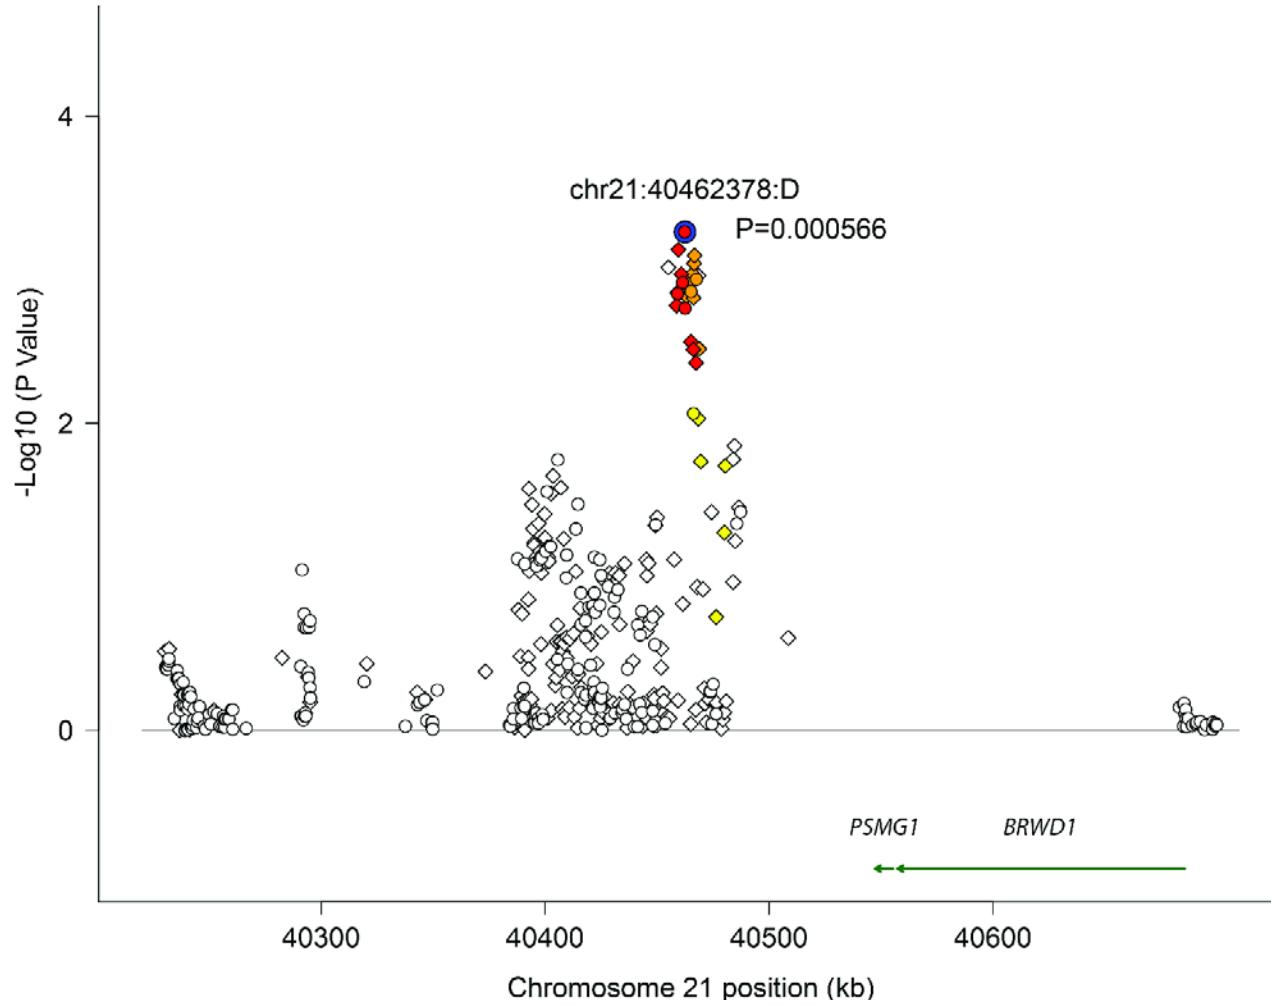

Figure S4: Genetic association results in chromosome 21q22 downstream of *PSMG1* in Takayasu's arteritis.
 Panel A shows the association results from the meta-analysis, while Panels B and C show the association results in the Turkish and the European-American cohorts, respectively. The red line represents the genome-wide level of significance ($P= 5 \times 10^{-8}$). Genotyped and imputed variants are shown in diamond-shaped symbols and circles, respectively. The colors represent r^2 values with the index SNP in each locus (white, $r^2 < 0.2$; yellow, $r^2 \geq 0.2-0.5$; orange, $r^2 \geq 0.5-0.8$; red, $r^2 \geq 0.8$).

A

B

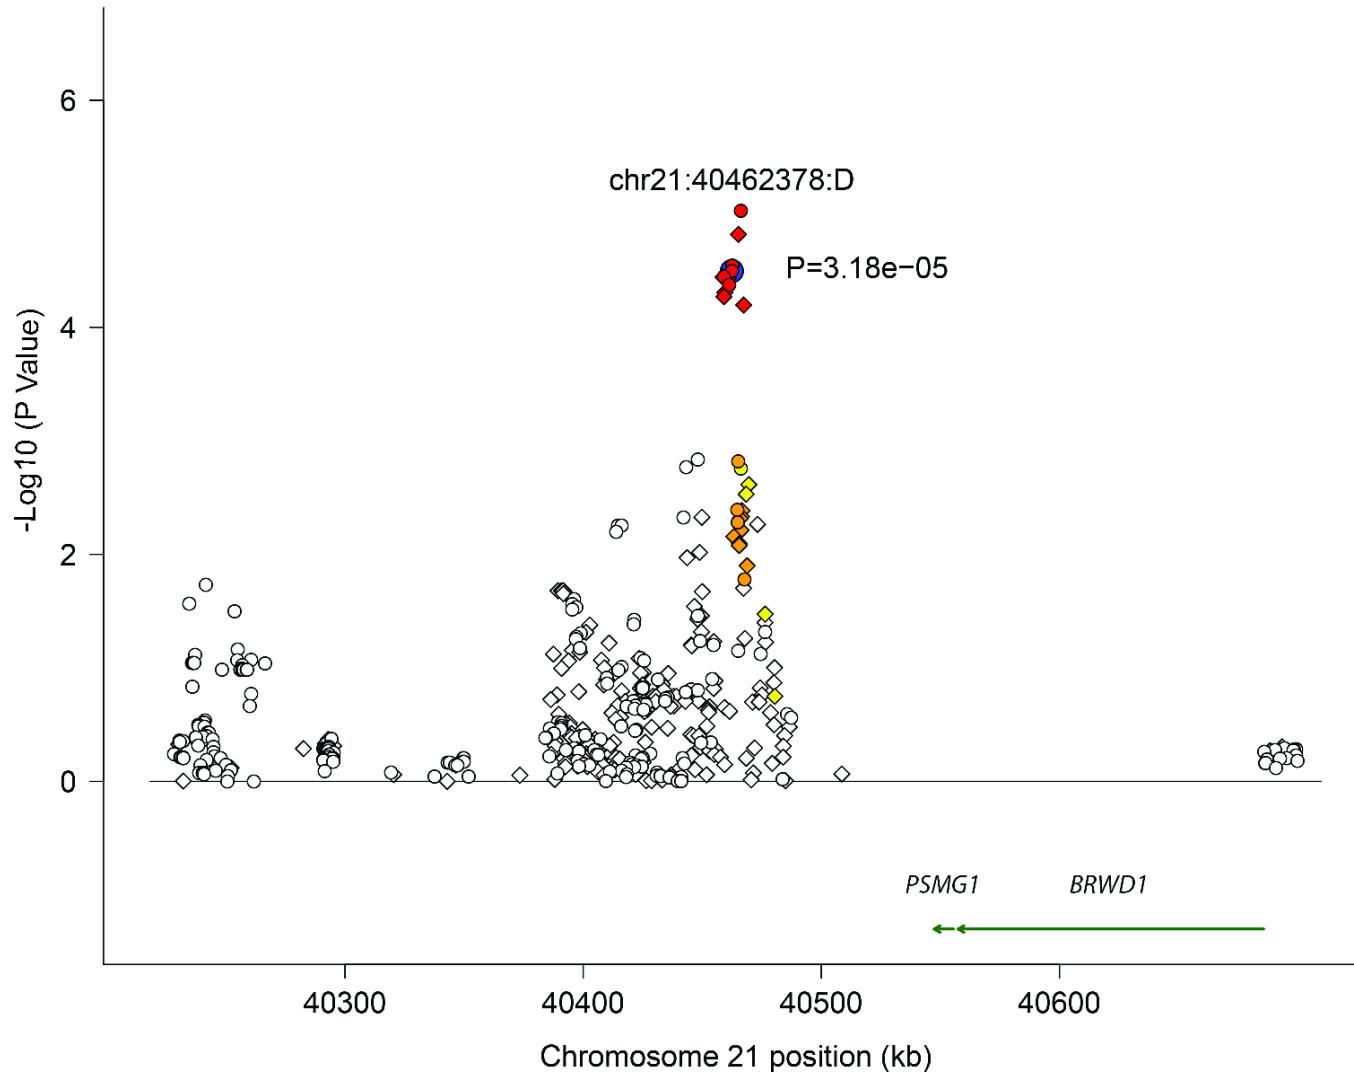

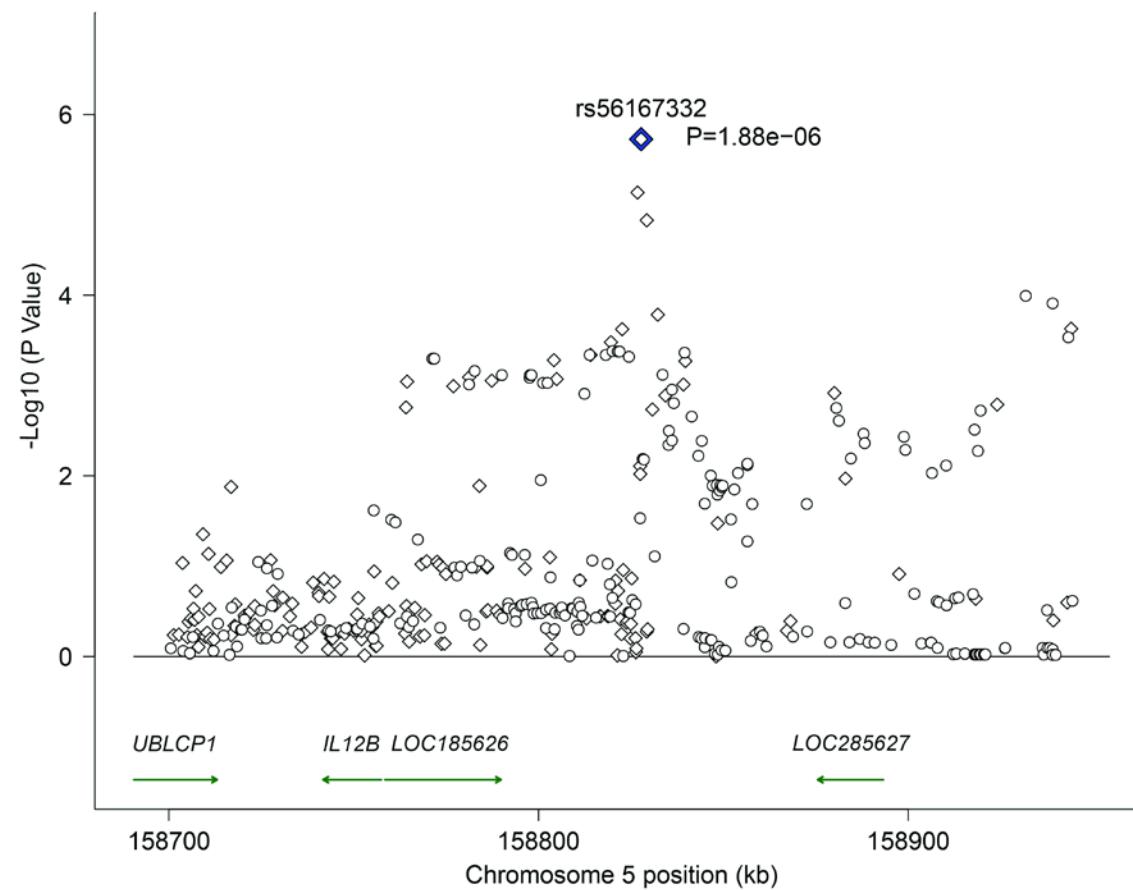

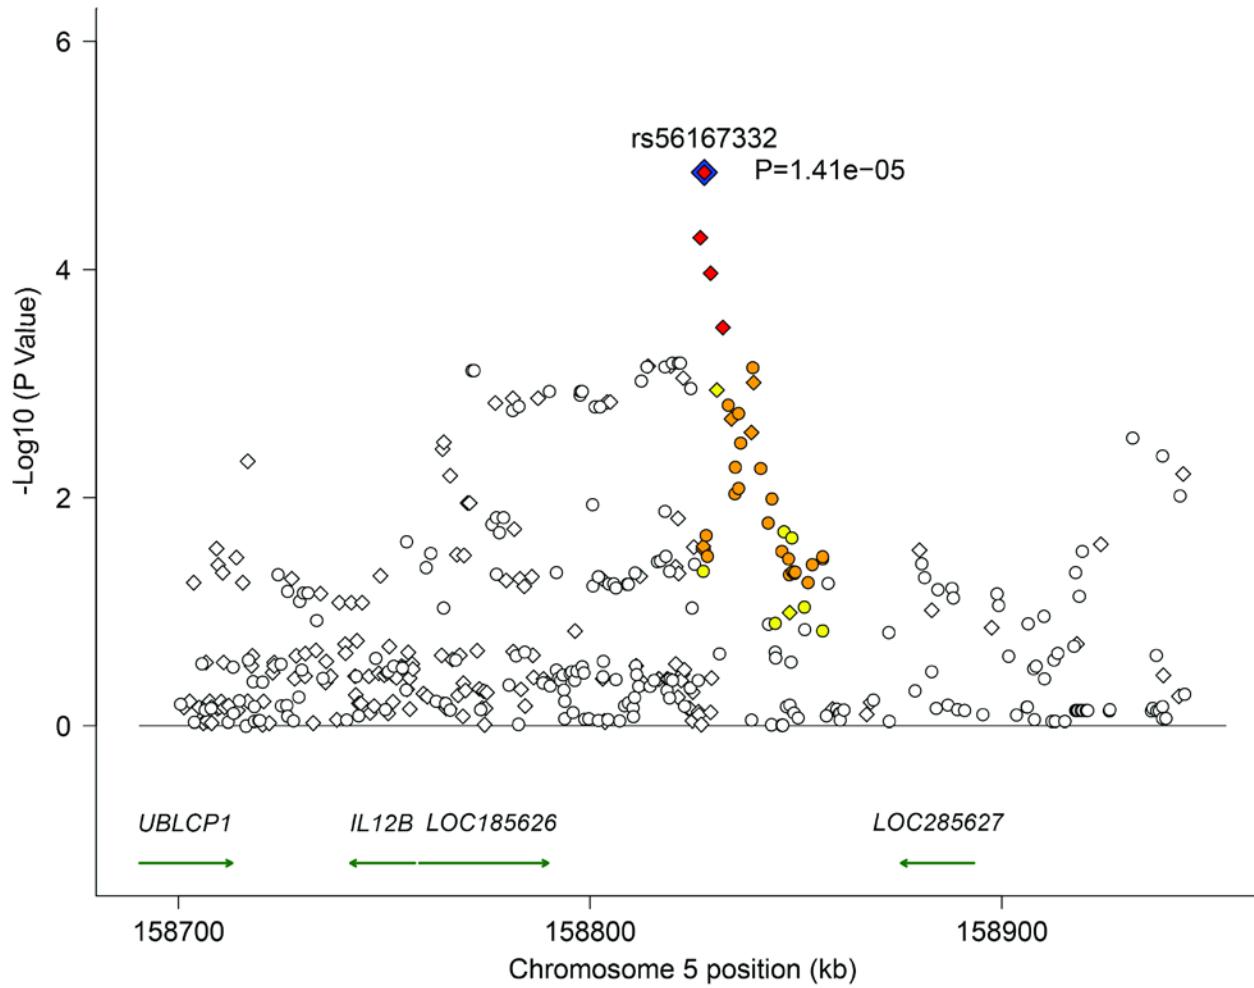

C

Figure S5: Genetic association results in the *IL12B* locus on chromosome 5 in Takayasu's arteritis. Panel A shows the association results from the meta-analysis, while Panels B and C show the association results in the Turkish and the European-American cohorts, respectively. Genotyped and imputed variants are shown in diamond-shaped symbols and circles, respectively. The colors represent r^2 values with the index SNP in each locus (white, $r^2 < 0.2$; yellow, $r^2 \geq 0.2 - 0.5$; orange, $r^2 \geq 0.5 - 0.8$; red, $r^2 \geq 0.8$).

A

B

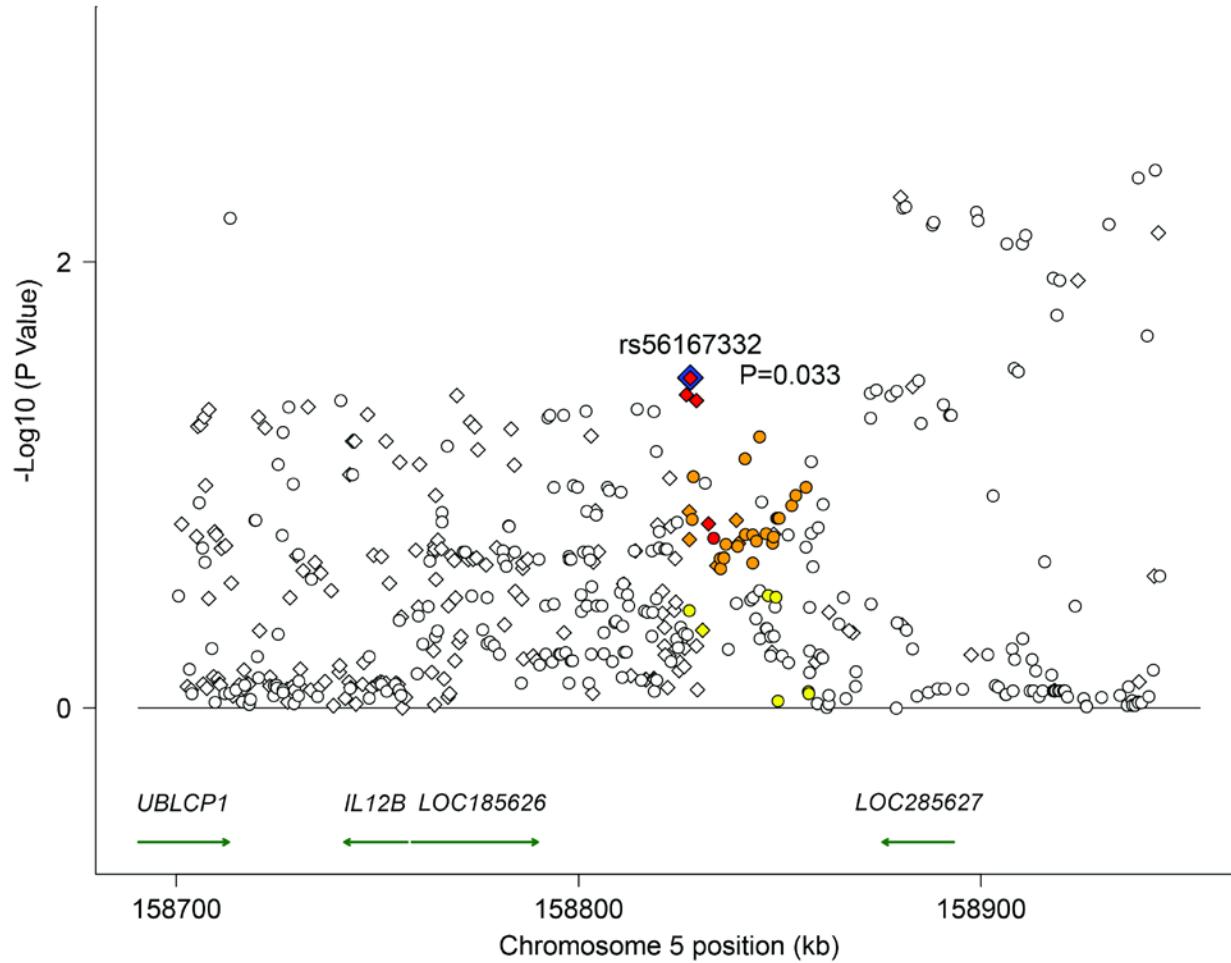

C

Table S1: Pair-wise correlation co-efficient values (r^2) between the genetic variants detected in the HLA class I and HLA class II regions, in the Turkish and the European-American cohorts.

Turkish

SNP	rs12524487	rs189754752	rs113452171
rs12524487	1	0.113	0.109
rs189754752	0.113	1	0.907
rs113452171	0.109	0.907	1

European-American

SNP	rs12524487	rs189754752	rs113452171
rs12524487	1	0.0334	0.0314
rs189754752	0.0334	1	1
rs113452171	0.0314	1	1

Table S2: Regression analysis between the three tag SNPs in *HLA-B/MICA* (rs12524487), and *HLA-DQB1/HLA-DRB1* (rs113452171 and rs189754752) confirms that these two genetic effects in the HLA region are independent genetic susceptibility loci for Takayasu's arteritis.
