**Supplementary Figure 1.** KC numbers following GdCl<sub>3</sub> administration. Animals were administered GdCl<sub>3</sub> or saline (control) at day 0. KCs in the tumour-bearing liver were identified using the F4/80+ marker and quantified as the number of positively stained cells/mm<sup>2</sup> at days 3, 7 and 16 post-treatment. Results are expressed as mean values ± SEM. N=6 animals per group.

Supplementary Figure 1.
