

Supplementary Figure 3

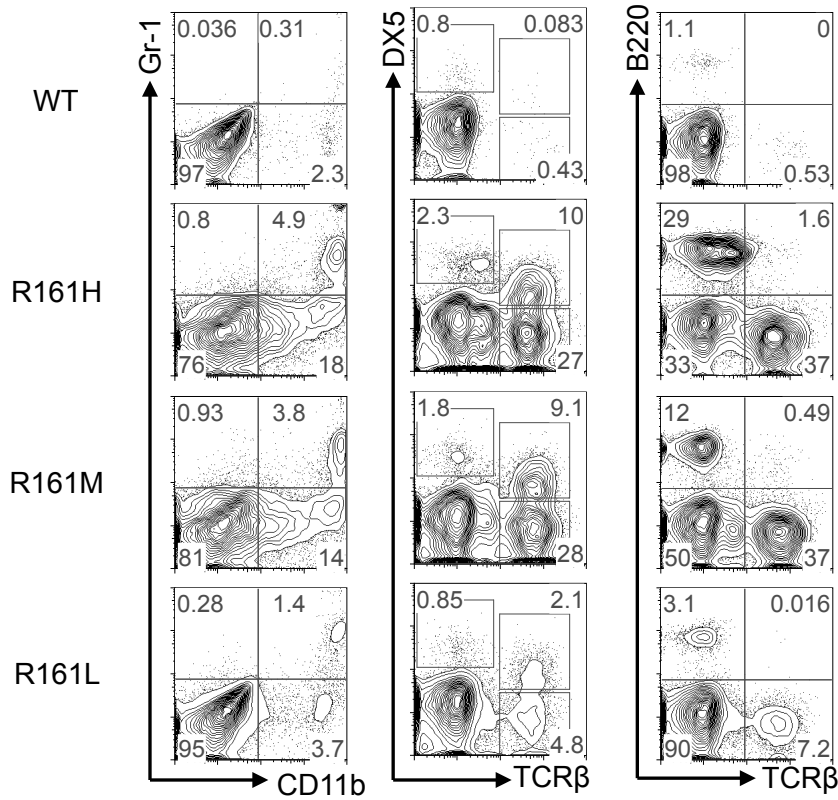

Figure S3. Phenotypic analysis of infiltrating cells of uveitic eye from R161 mouse lines.

Ocular infiltrating cells from uveitic R161 lines include granulocytes/neutrophils (Gr1⁺CD11b⁺), NK (DX5⁺TCRβ⁻), NKT (DX5⁺TCRβ⁺), T cells and B cells. These inflammatory cells were rarely detected in healthy WT eyes. Gated on total live cell populations.
