

Structural and physiological analyses in Salsoleae (Chenopodiaceae) indicate multiple transitions among C₃, intermediate and C₄ photosynthesis.

Elena V. Voznesenskaya, Nuria K. Koteyeva, Hossein Akhani, Eric H. Roalson, and Gerald E. Edwards

Table S1 and S2 show quantitative information on different tissue measured from light micrographs of leaf cross sections. Results from this study show the first four species, *S. genistoides*, *S. masenderanica*, *S. montana*, and *S. webbii* are C₃ species, and *S. divaricata* is a C₃-C₄ intermediate. Data is also shown for *S. arbusculiformis* a C₃-C₄ intermediate (Voznesenskaya et al 2001) the C₄ species *X. richteri*, *C. orientale*, and the C₄ species *S. arbuscula* (see Voznesenskaya et al. 2001).

Appendix S1 includes review of the sampling information for phylogenetic analysis. GenBank accession numbers for ITS sequences follow species names. This includes numbers for the new sequence information that was generated in this study for *S. genistoides* and *S. webbii*; the corresponding voucher numbers of specimens available at the WSU herbarium are:

Salsola genistoides Juss. ex Poir WS386418

Salsola webbii Moq. WS386419

Table S1. Mesophyll cell (M1, M2), hypodermal cell (H), bundle sheath cell (BS), Kranz like cell (KLC), and Kranz cell (KC) sizes of *Salsola* s.l. species. The C₃ species have BS cells, the C₃-C₄ species have KLC, the C₄ species have KC and H cells (instead of M1).

Species	M1 or H		M2		Ratio M1/M2, H/M2		M1+M2	BS, KLC, KC
	Length μm	Width μm	Length μm	Width μm	Length	Width	Length μm	Area μm ²
<i>S. genistoides</i> C ₃	72.3±2.4	17.9±0.5	84.3±2.4	19.3±0.5	0.9	0.9	168.4±3.9	935.0±106.9
