*Five molecular markers per species were used for genotyping of parasite clones in different compartments. Nested or seminested PCR and capillary electrophoresis were used. Molecular markers genotyped for *Plasmodium falciparum*: the microsatellites ARA2, TA1, Polya, and PFPK2¹ and the gene *msp2*.² Molecular markers genotyped for *P. vivax*: the microsatellites 1.501, 3.502, 3.26, and MS16 and the gene *msp3a*.³
