

Figure S1. Expression of CD40 and levels of IL-8 in supernatants after using range concentrations of 0.1, 1, 10 and 100 $\mu\text{g/mL}$ of EA, SR, WS and MI. \downarrow designs results obtained for the concentration 10 $\mu\text{g/mL}$, which was selected for further exposure assays.

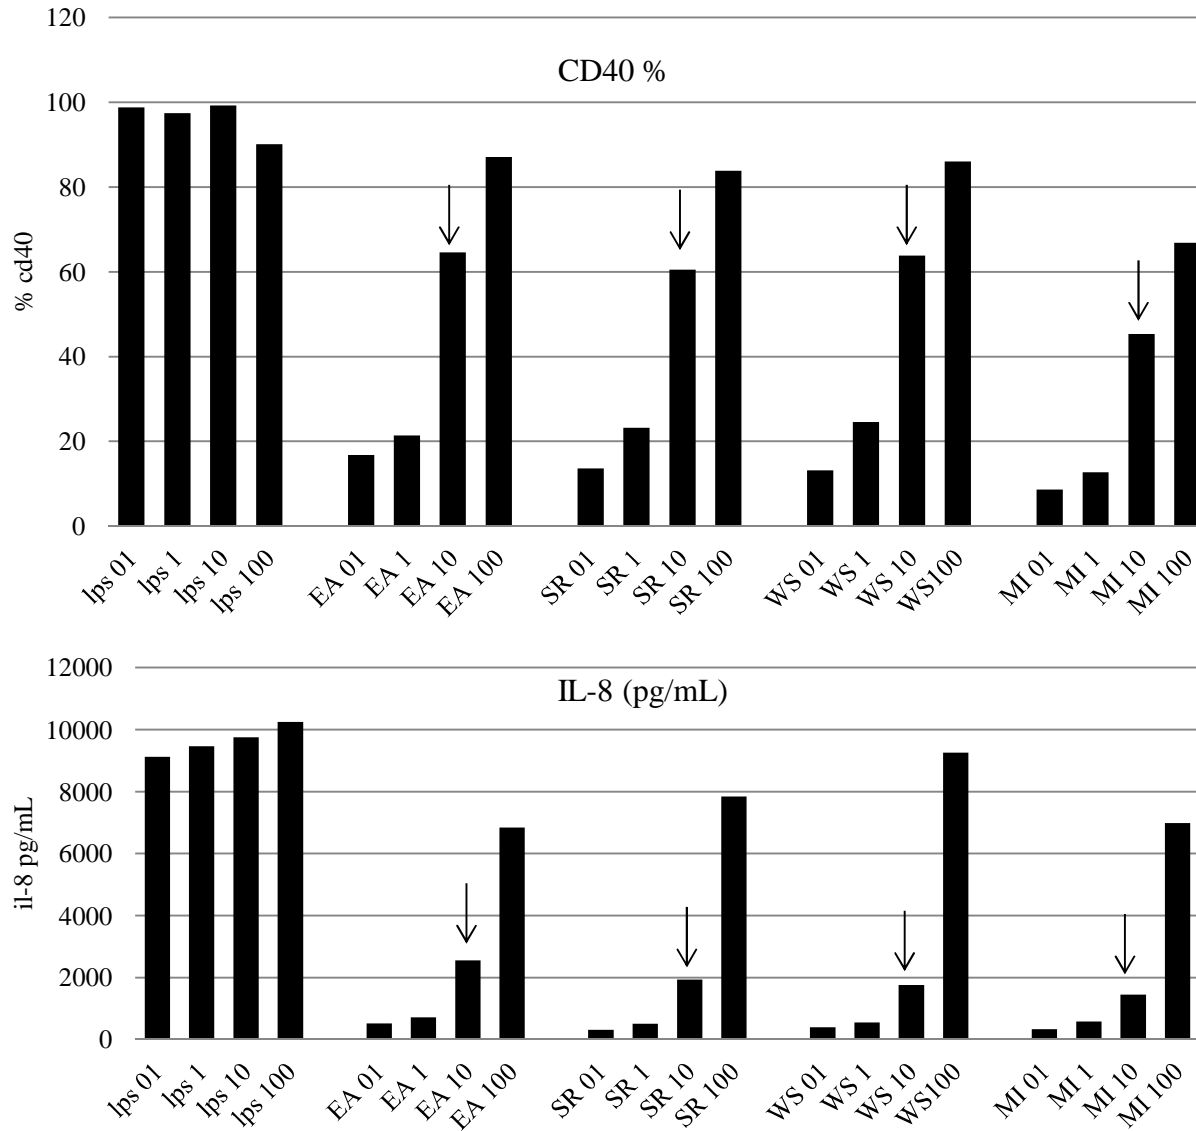

Figure S2. Mixed Lymphocytic Reactions (MLR) testing different MoDC:T cell ratio (1:2; 1:5; 1:10 and 1:100) using MoDC previously exposed to LPS.
