

Supplementary Table S4:

Summary of lifespan experiments. Median lifespan is calculated from the GraphPad Prism Software while Maximum lifespan was calculated by the mean lifespan of the oldest 10% cohort in each experiment. P-values are calculated from Log-Rank Tests for the entire population for the complete lifespan.

Trial 1 (Fig 1D)	Number of animals	Median Lifespan (days)	Maximal Lifespan (days)	p-value against N2	% change against N2
N2	78	13.5	17.94		
<i>Mir-80(nDf53)</i>	81	14	21.22	p<0.01	18.2
