<sup>a</sup> All strains carried the following markers in common: (*aer*)Δ1 (*trg*)Δ4543 *yjgG::Gm*.

**Fig. S1 Correlation of *in vivo* kinase activity and direction of flagellar rotation in mutant receptor strains.**

The plot shows the kinase activities and flagellar rotation behaviors of the various mutant receptor strains listed in Tables 1 and S1. The four receptor mutants with red labels were classified as kinase-inactive; the four with black labels were classified as kinase-active.

**Fig. S2 Representative array patches from the receptor mutants used in this study.**
