

Source Data Fig 7A

Note: Lower band (~120kDa) indicated by\* was detected when membrane was blotted with 5% BSA solution, but not detected when blotted with 5% dry milk solution. Retroviral expression of human Phlpp2 in mouse CD4 T cells generates only the upper band (150kDa), suggesting that the lower band is a non-specific band.

Note: This membrane was previously blotted with IκBα antibody (Fig 7C).
