

Figure S1. BXIs represent relatively selective cytotoxicity against lung cancer cells (A549 and H1299) compared to normal human bronchial epithelial cells (BEAS-2B). BEAS-2B, A549 and H1299 cells were treated with the 1 μM of BXI-61 or BXI-72 for 72 hours. Cell growth was analyzed by SRB assay. Error bars represent \pm S.D.
