

## Supplementary Figure 3

**Supplementary Figure 3.** Extracellular ATP and UTP inhibited the expression of Claudin-1. (A) Expression of Claudin-1 was detected by real-time PCR and Western blotting after ATP treatment for 6 h and 12 h. (B) Real-time PCR and Western blotting were used to examine the mRNA and protein expression of Claudin-1 after UTP treatment. Three independent experiments were performed. \* $P < 0.05$  vs. control cells.
