

Supplementary Figure 4

Supplementary Figure 4. The effects of extracellular UTP on expressions of IL-8, Snail and E-cadherin in prostate cancer cells. **(A)** Real-time PCR and **(B)** ELISA assay were used to evaluate the expression of IL-8 at mRNA and protein levels. Real-time PCR and Western blotting were used to examine the mRNA and protein expression of **(C and D)** Snail and **(E and F)** E-cadherin after UTP treatment, respectively. Three independent experiments were performed. * $P < 0.05$ vs. control cells.
