

Cladogram - Pouch samples, four group comparison

 FAP

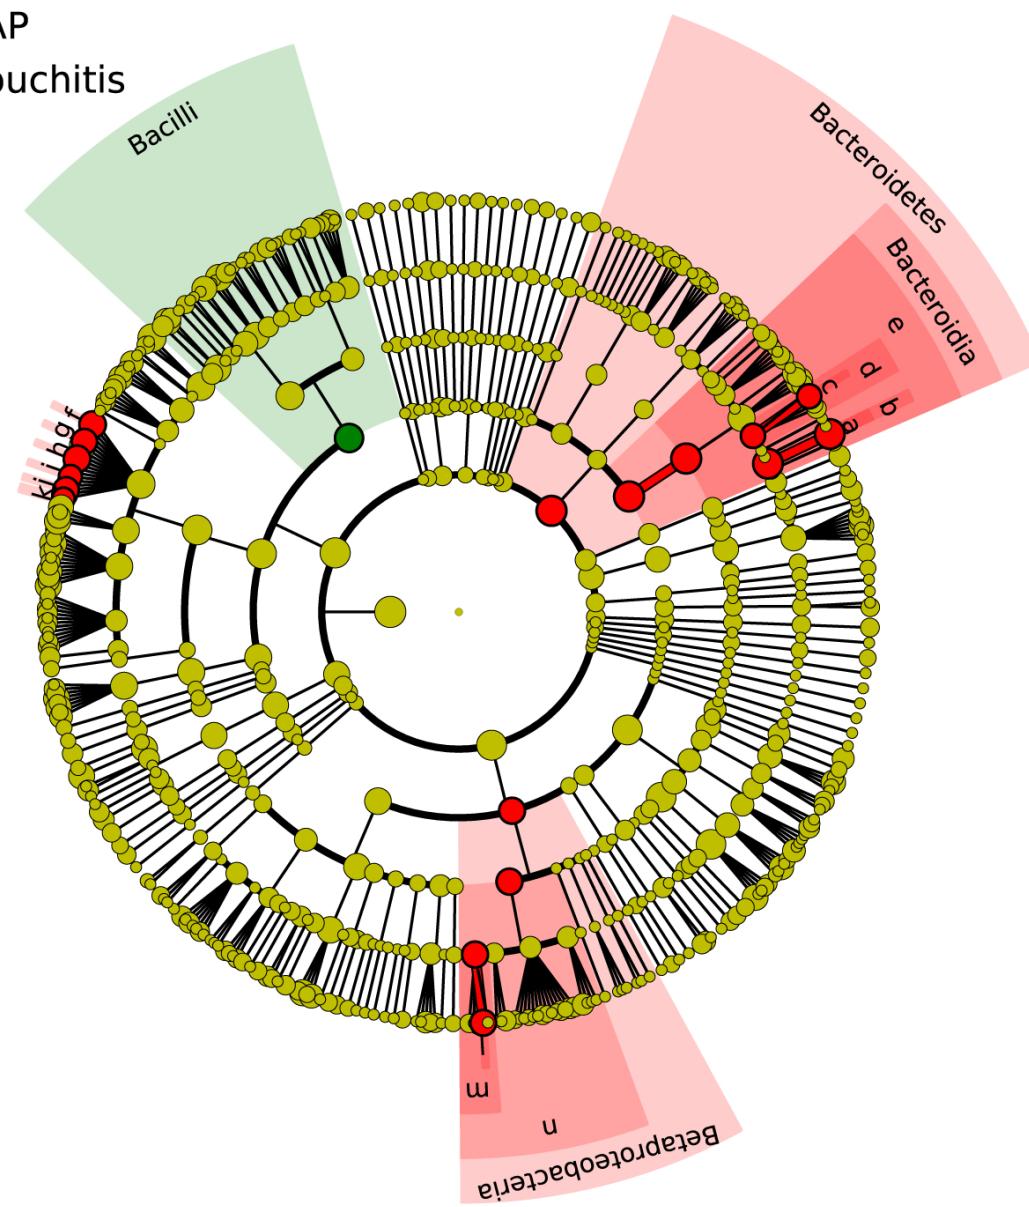

-  a: Bacteroides
-  b: Bacteroidaceae
-  c: Parabacteroides
-  d: Porphyromonadaceae
-  e: Bacteroidales
-  f: Blautia
-  g: ISLachnospiraceae
-  h: Moryella
-  i: unculturedLachnospiraceae
-  j: Sutterella
-  k: Alcaligenaceae
-  l: Burkholderiales

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

Cladogram - Pouch samples, FAP vs Pouchitis

█ FAP

█ Pouchitis

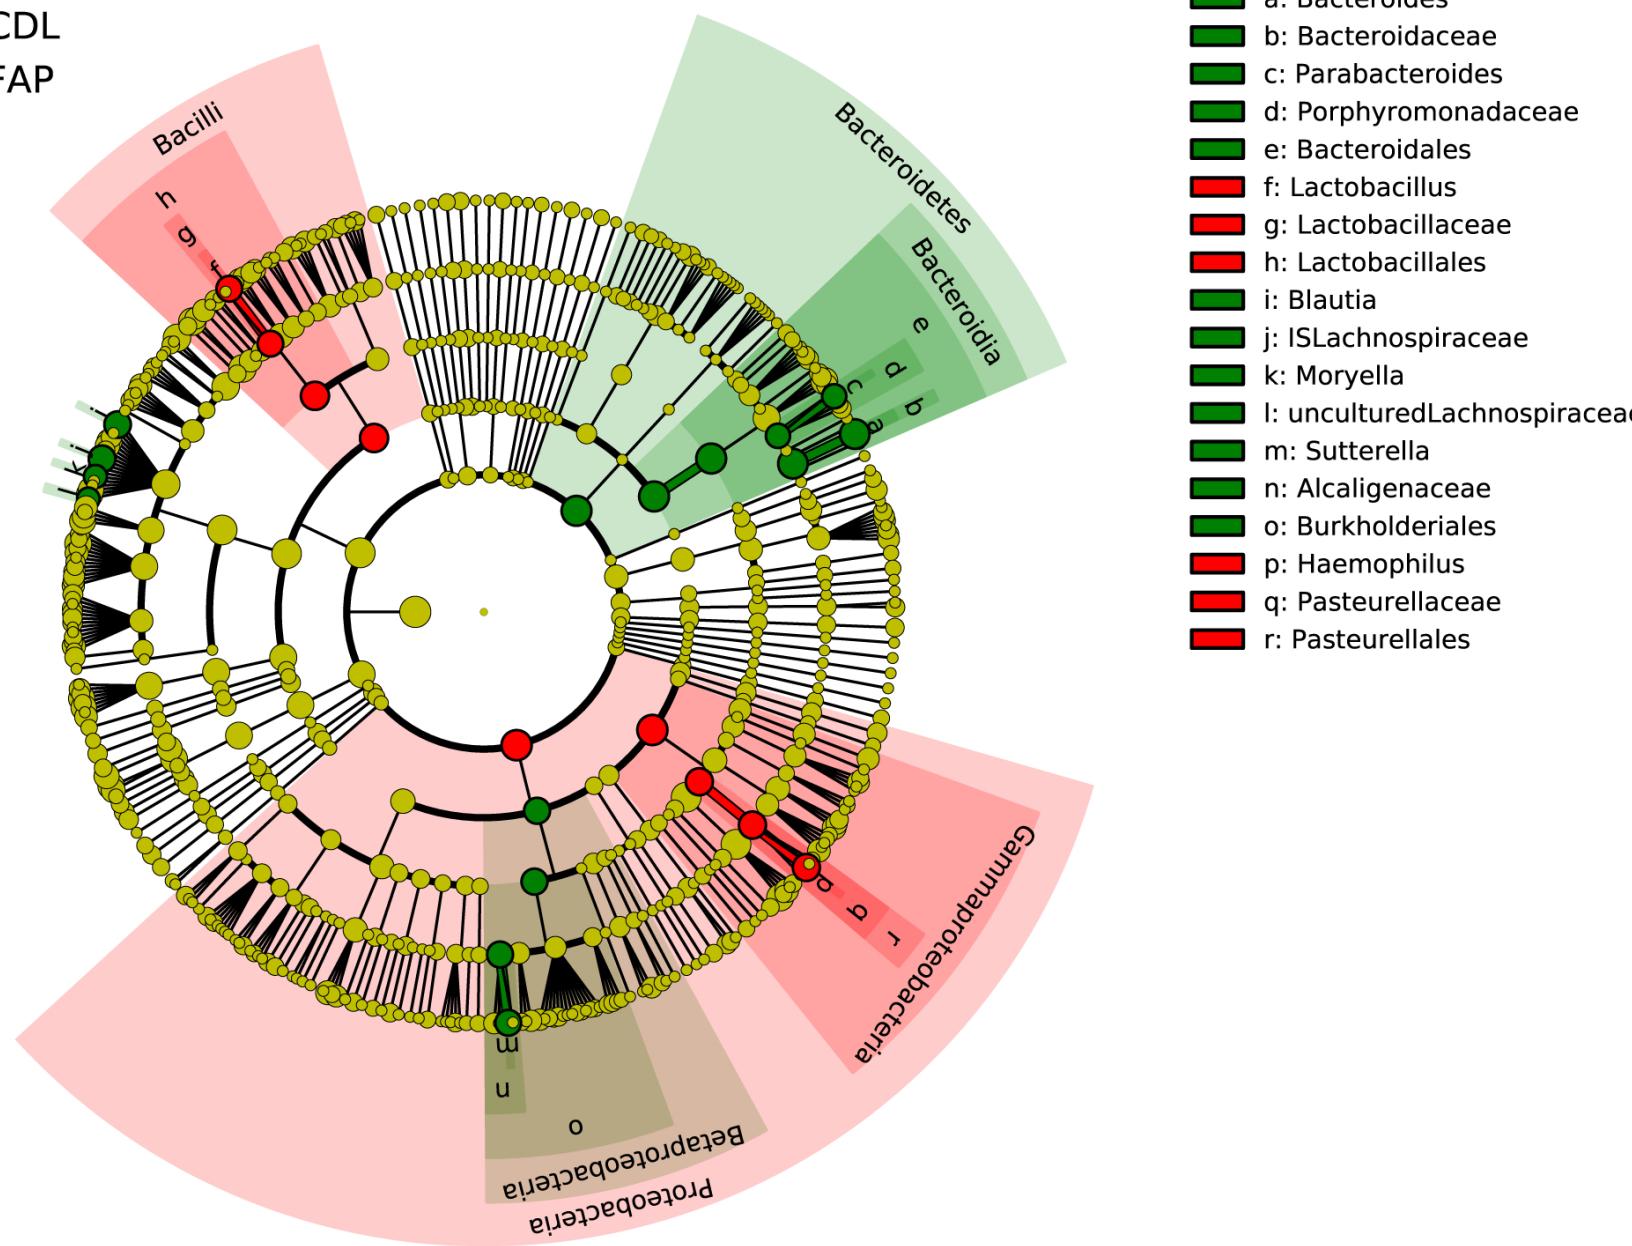

- █ a: *Bacteroides*
- █ b: *Bacteroidaceae*
- █ c: *Parabacteroides*
- █ d: *Porphyromonadaceae*
- █ e: *Bacteroidales*
- █ f: *Blautia*
- █ g: *Dorea*
- █ h: *ISLachnospiraceae*
- █ i: *Moryella*
- █ j: *Roseburia*
- █ k: *unculturedLachnospiracea*
- █ l: *Sutterella*
- █ m: *Alcaligenaceae*
- █ n: *Burkholderiales*

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

Cladogram - Pouch samples, FAP vs Crohn's disease-like

■ CDL
■ FAP

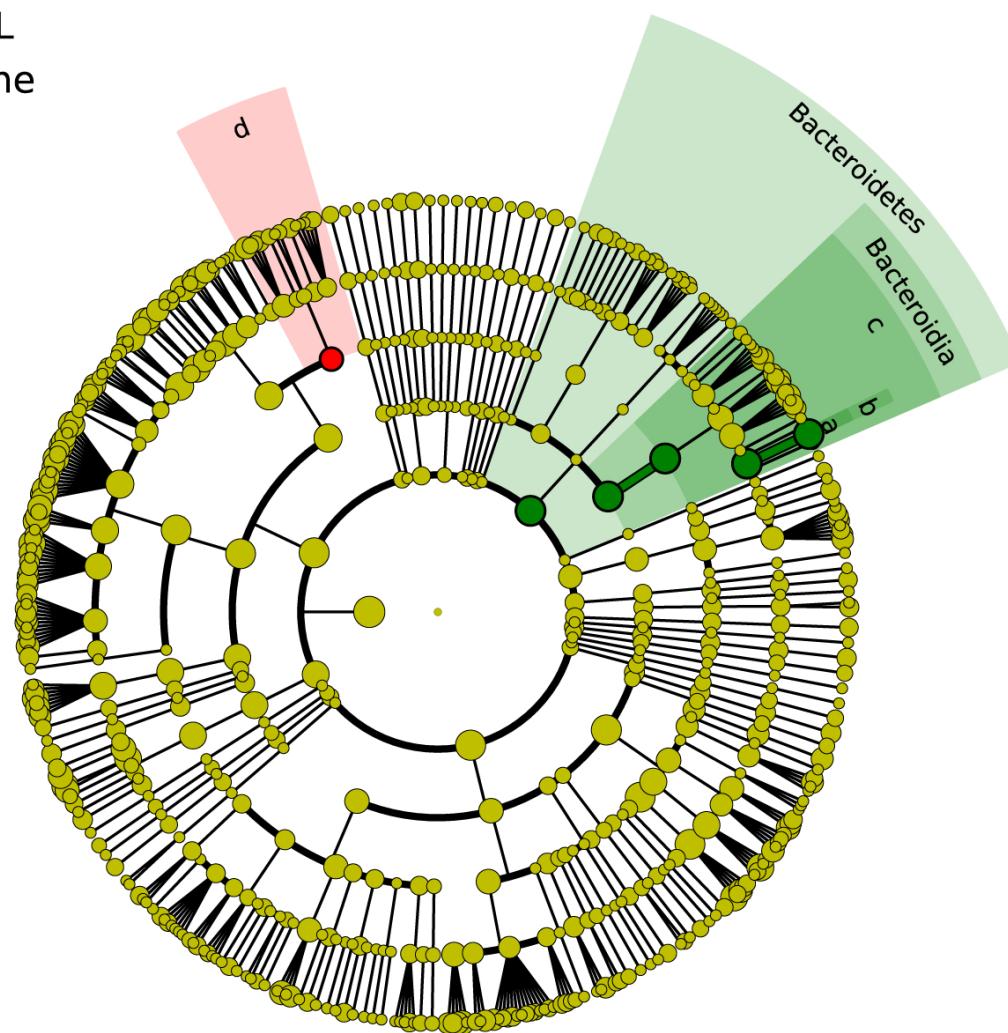

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

Cladogram - Pouch samples, No Pouchitis vs Crohn's disease-like

 CDL
 None

 a: *Bacteroides*
 b: *Bacteroidaceae*
 c: *Bacteroidales*
 d: *Bacillales*

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

Cladogram - Pouch samples, No Pouchitis vs Pouchitis

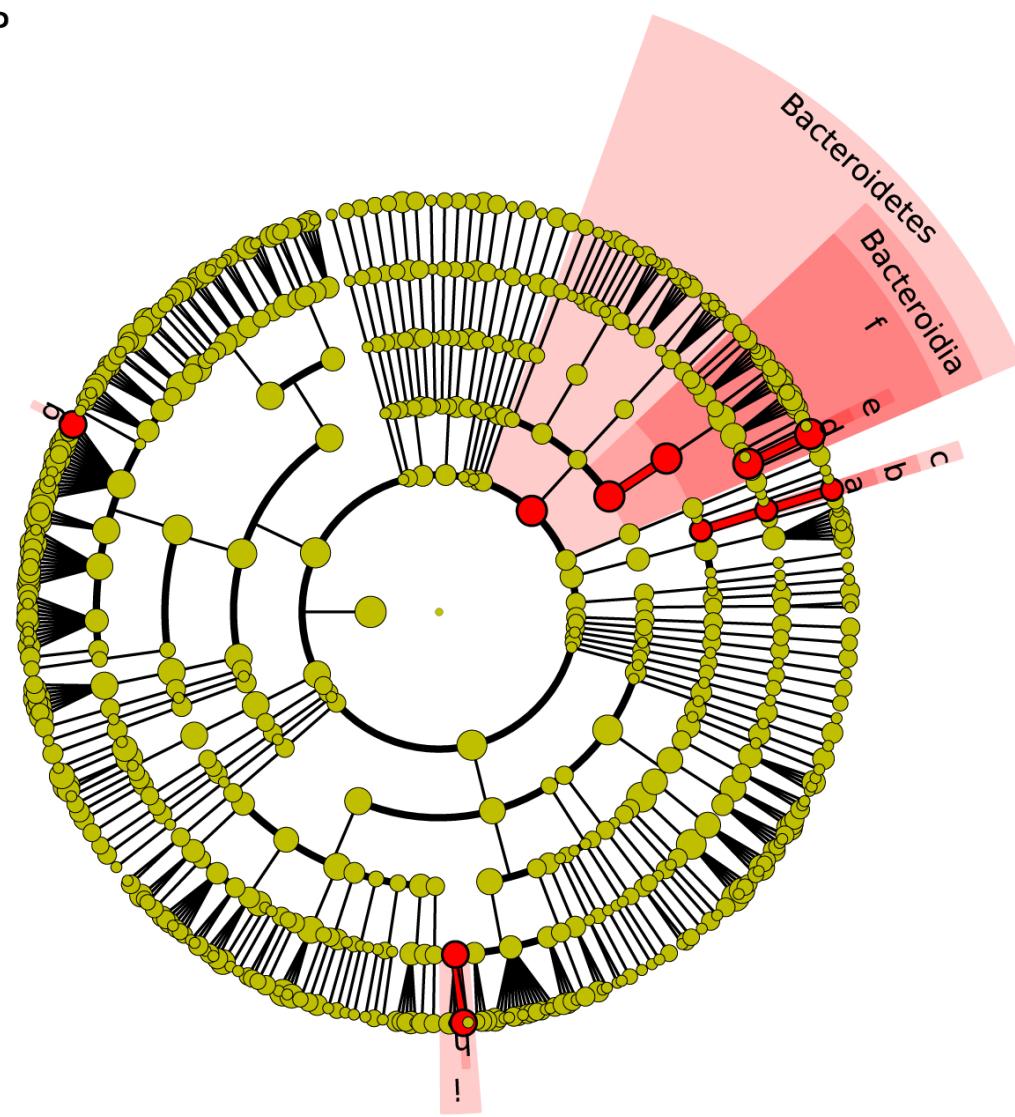

█ None
█ Pouchitis

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

Cladogram - Afferent Limb samples, four group comparison

 FAP

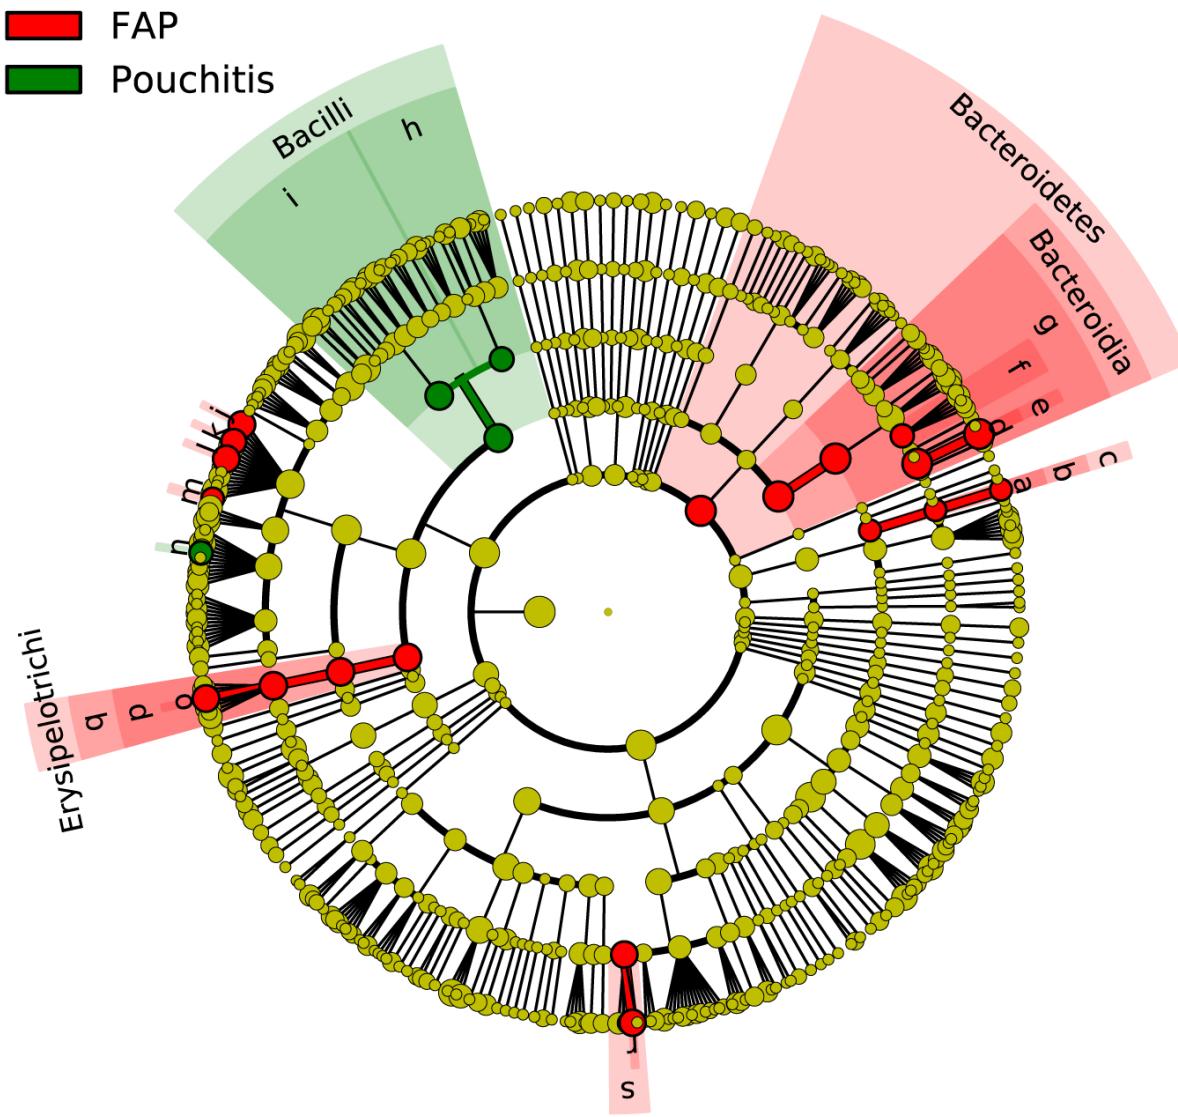

-  a: Coriobacterineae
-  b: Coriobacteriales
-  c: Coriobacteridae
-  d: Bacteroides
-  e: Bacteroidaceae
-  f: Bacteroidales
-  g: Blautia
-  h: Sutterella
-  i: Alcaligenaceae

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

Cladogram - Afferent Limb samples, FAP vs Pouchitis

█ FAP
█ Pouchitis

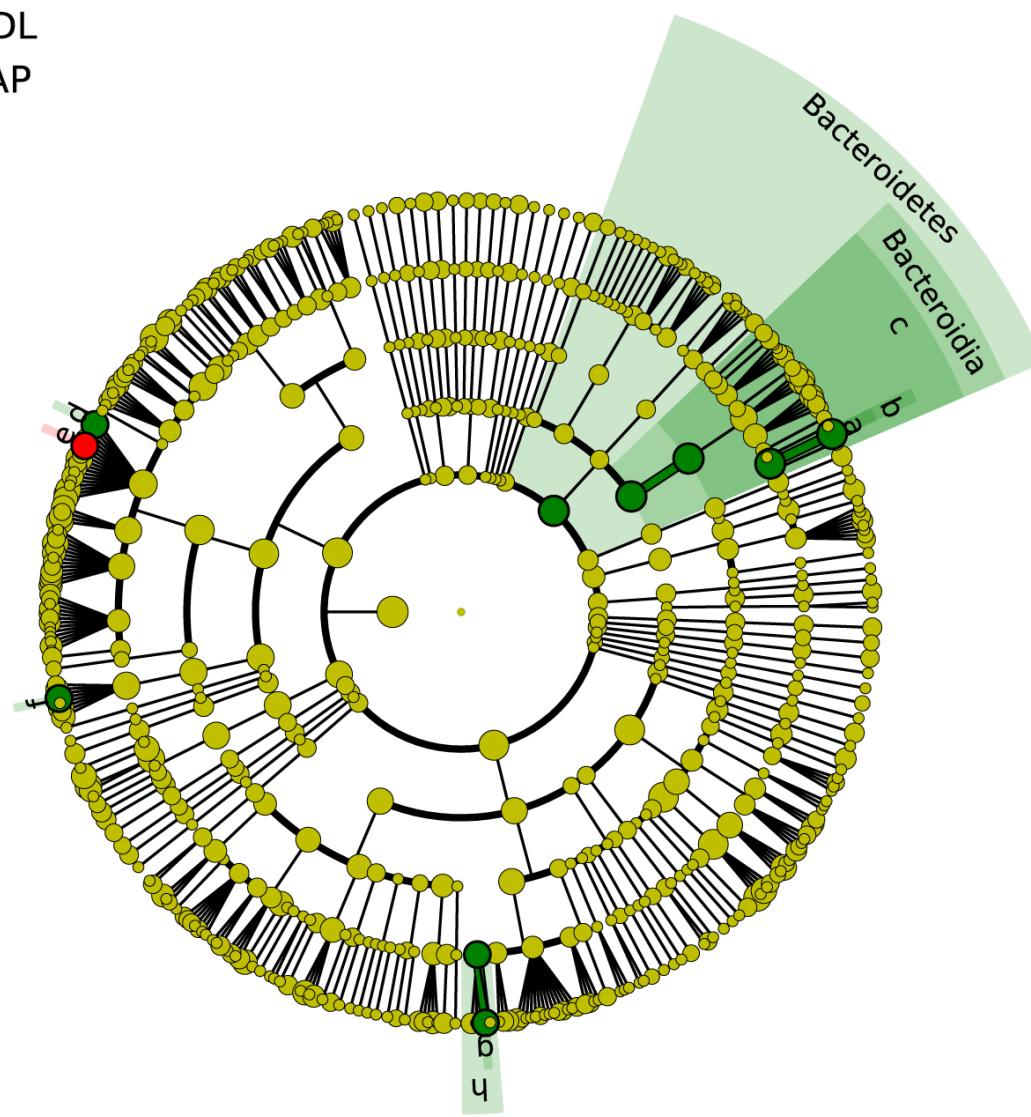

- █ a: Coriobacterineae
- █ b: Coriobacteriales
- █ c: Coriobacteridae
- █ d: Bacteroides
- █ e: Bacteroidaceae
- █ f: Porphyromonadaceae
- █ g: Bacteroidales
- █ h: Bacillales
- █ i: Lactobacillales
- █ j: Blautia
- █ k: Dorea
- █ l: ISLachnospiraceae
- █ m: unculturedLachnospiraceae
- █ n: Incertae_Sedis3
- █ o: Incertae_Sedis_Erysipelotrich
- █ p: Erysipelotrichaceae
- █ q: Erysipelotrichales
- █ r: Sutterella
- █ s: Alcaligenaceae

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

Cladogram - Afferent Limb samples, FAP vs Crohn's disease-like

█ CDL
█ FAP

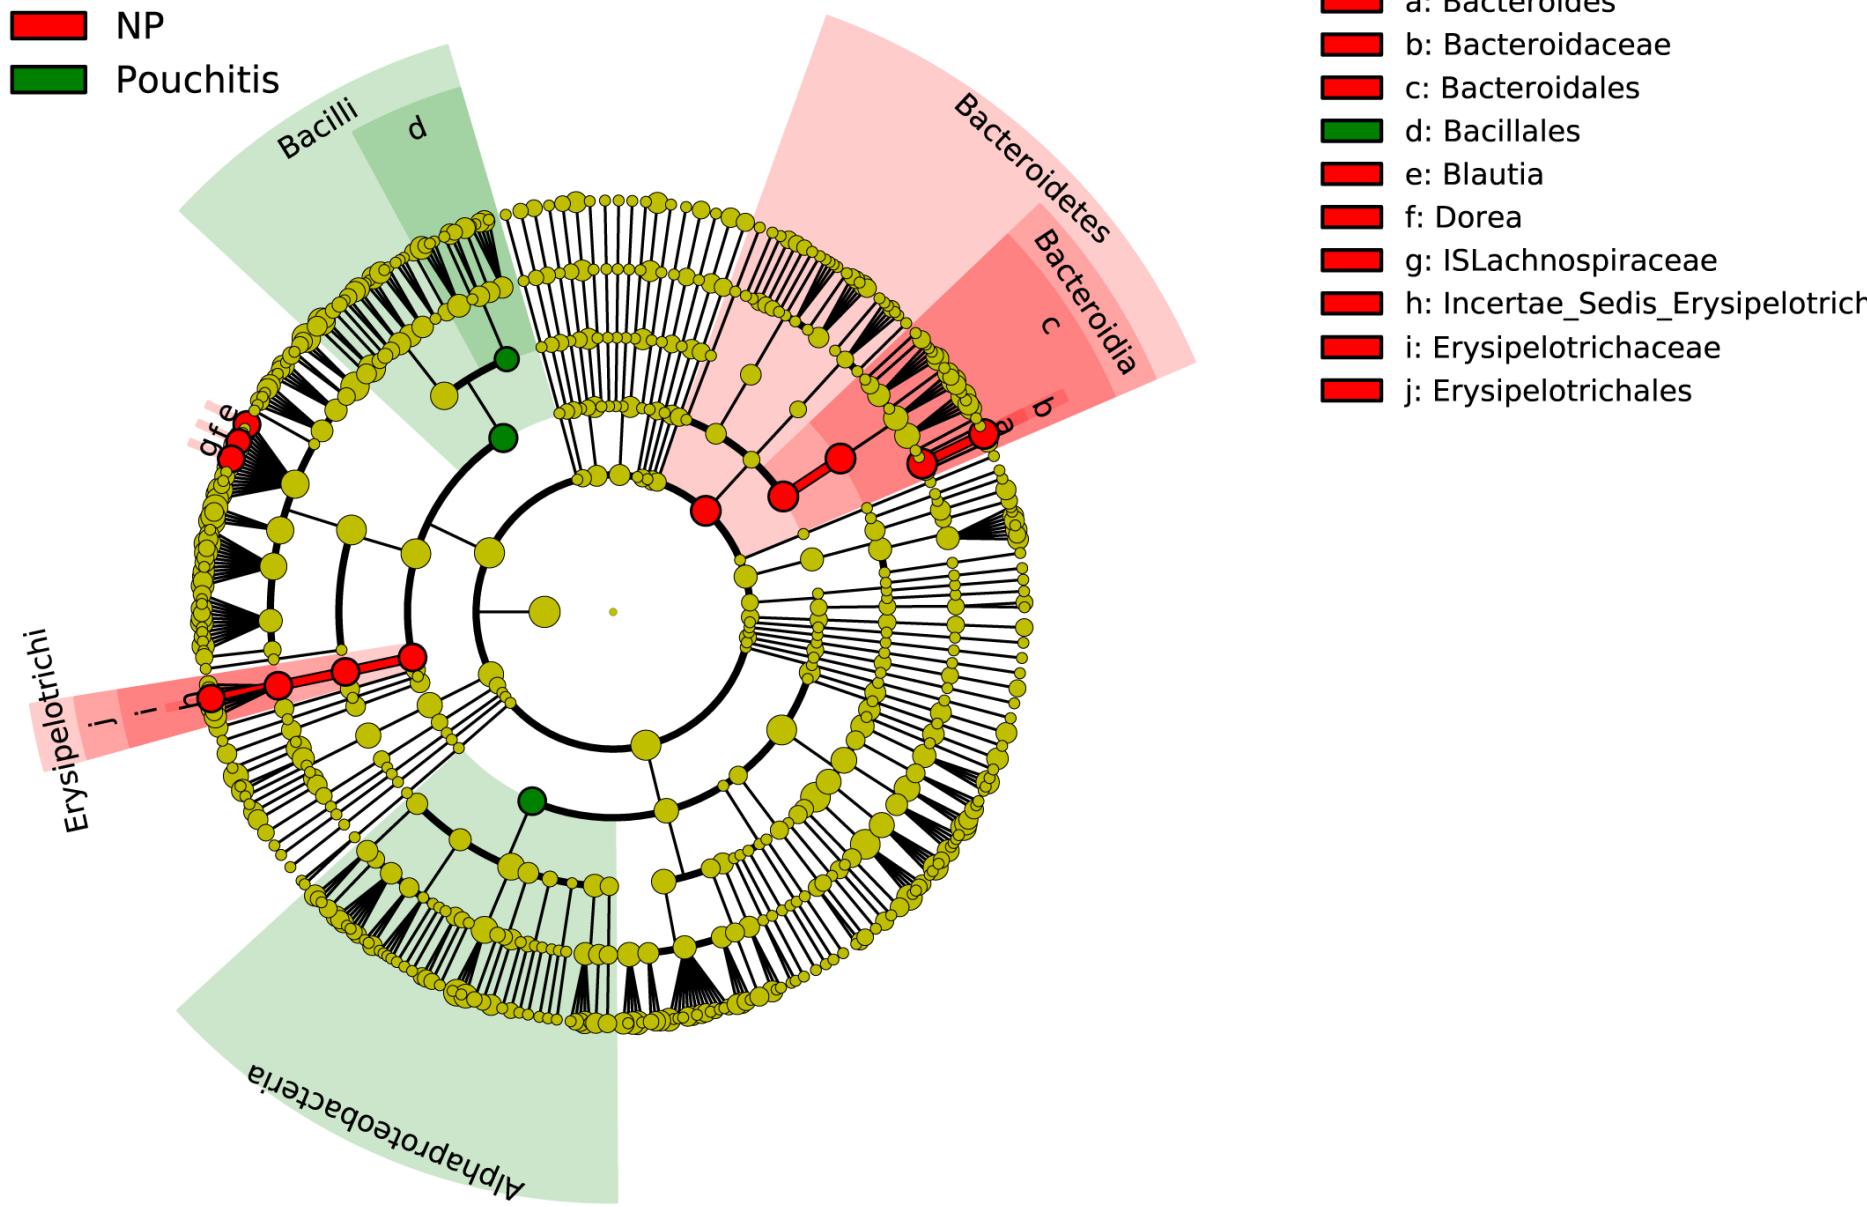

- █ a: Bacteroides
- █ b: Bacteroidaceae
- █ c: Bacteroidales
- █ d: Blautia
- █ e: Epulopiscium
- █ f: Incertae_Sedis_Erysipelotrichia
- █ g: Sutterella
- █ h: Alcaligenaceae

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

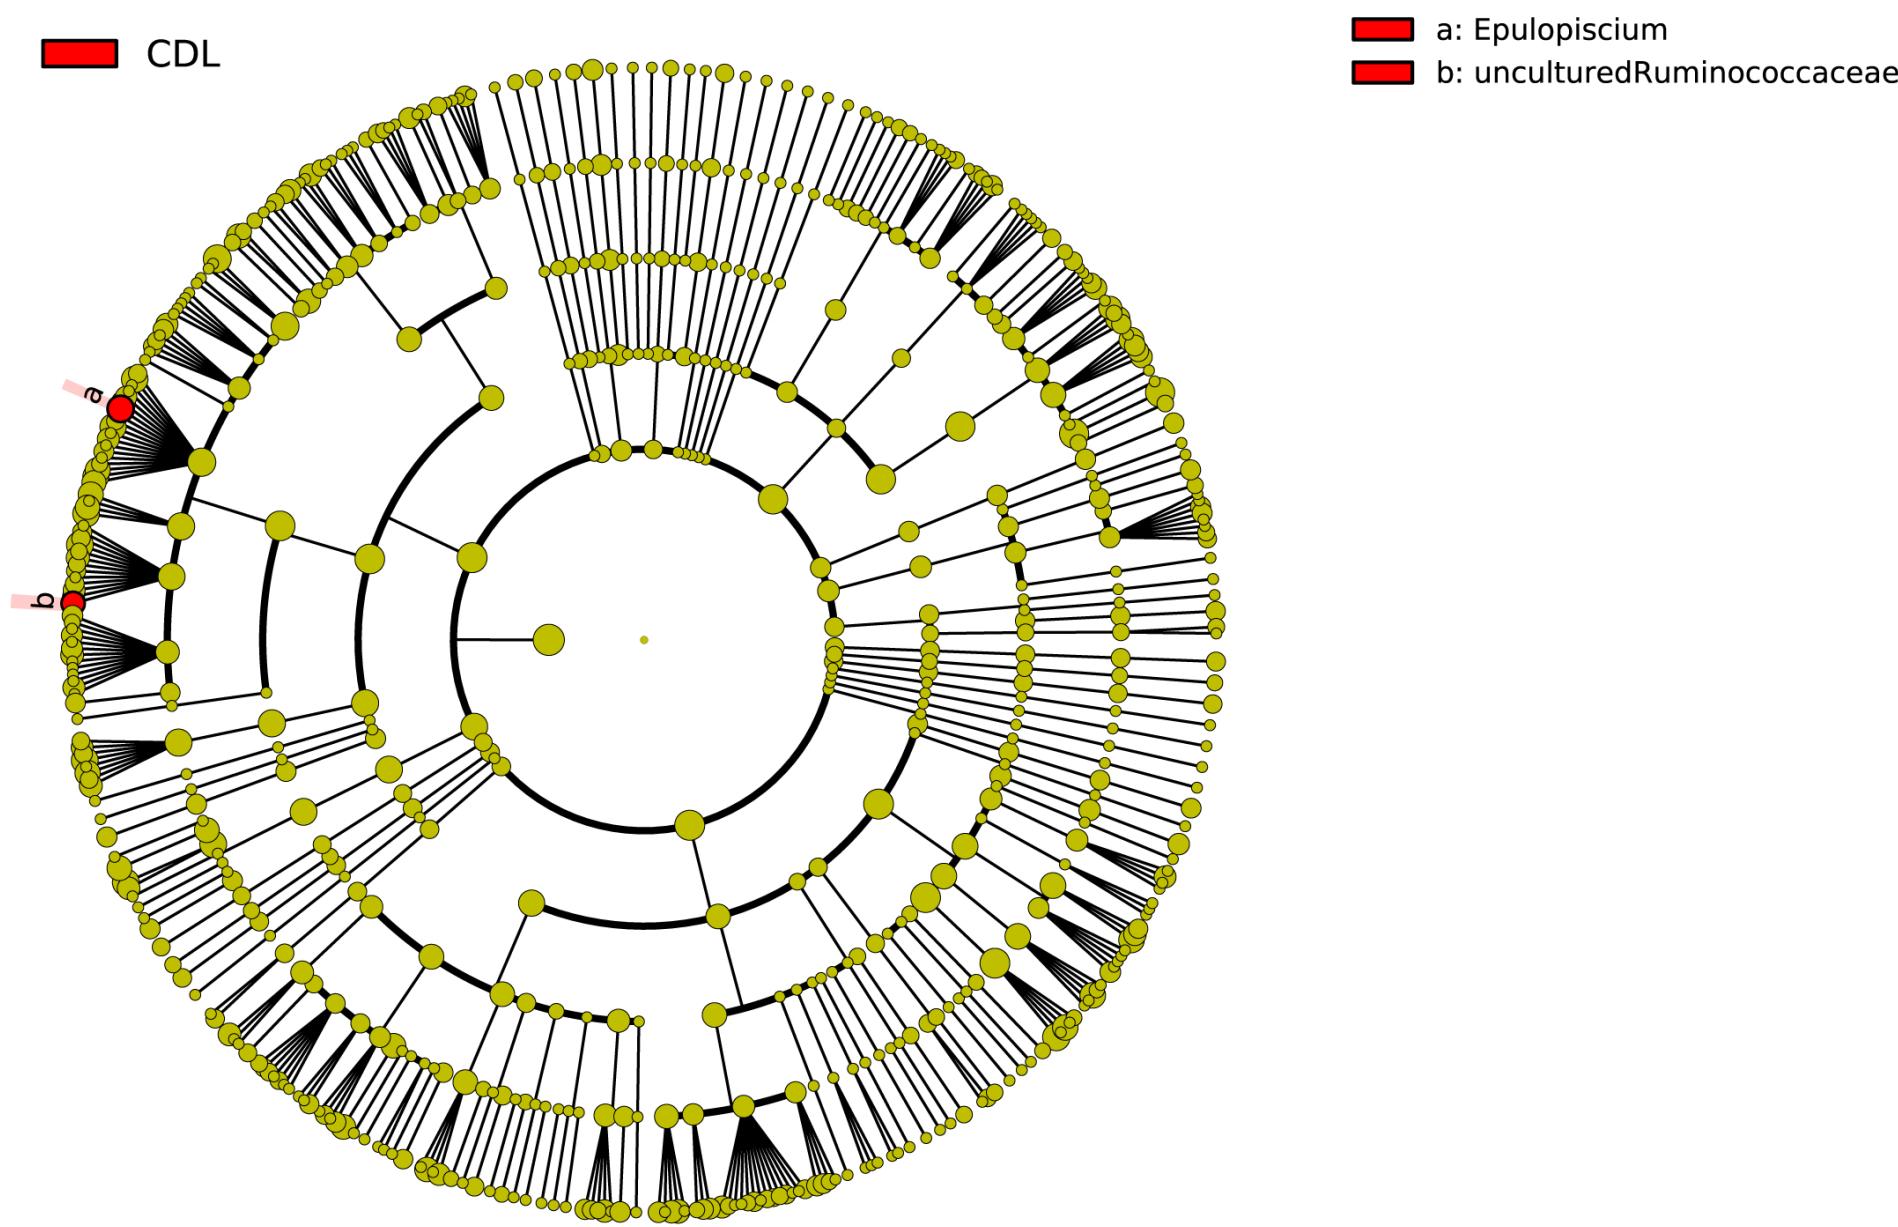

Cladogram - Afferent Limb samples, No Pouchitis vs Pouchitis

█ NP
█ Pouchitis

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated

Cladogram - Afferent Limb samples, No Pouchitis vs Crohn's disease-like

Significant associations as highlighted, with outcome group(s) where increased proportion was detectable indicated
