

Supplementary FIGURE S3.

Histologic Appearance of Local Cancer Induced by Xenotransplantation.

Legend to Figure S3. (A) Micrograph of the histological appearance of local cancer generated by orthotopic xenografting of only PrCa cells (no added rat UGM cells). (B) Comparison with the histologic picture of the Stage I cancer of the patient donating the specific cultured prostate cancer tissue. Note the tendency to form back-to-back glands and gland-within-gland structures. Cells with nucleoli are common.
