

SUPPLEMENTARY FIG. S2. Concentration-dependent changes in retinoid induced neuronal differentiation of NE-4C neural stem cells. **(A)** Immunostainings for neuron-specific β -III tubulin in cultures of NE-4C neural stem cells grown in the presence of various RE, ROL, RA concentrations for 5 days. **(B)** Percentage of neuron-specific β -III tubulin positive neurogenic aggregates in ROL-induced cultures treated with small pan RAR antagonist concentrations. * $P < 0.05$. Scale bar: 100 μ m.
