

Figure S4: Incidences of acute diarrhea in 2008-2009 for France. Observed incidences are shown with black lines while expected incidences are shown with gray lines along their 95% confidence interval in dashed lines. Expected incidences are based on 2004-2008 data. The comparison shows that estimations of the 2008-2009 incidences are consistent with observations. The plot shows smoothed data.
