

Table e-1. Seizure outcome for adults and children at two, five and ten years after surgery.

	Adults			Children		
	2 year seizure outcome n= 187*	5 year seizure outcome n= 92	10 year seizure outcome n=98	2 year seizure outcome n=87*	5 year seizure outcome n=42	10 year seizure outcome n=46
	n (%)	n (%)	n (%)	n (%)	n (%)	n (%)
Sustained seizure freedom	93 (50)	36 (39)	42 (43)	46 (53)	20 (48)	19 (41)
Seizure free last year of follow-up	17 (9)	18 (20)	21 (21)	1 (1)	3 (7)	2 (4)
>75% seizure reduction	25 (13)	14 (15)	13 (13)	16 (18)	12 (29)	10 (22)
50-75% seizure reduction	23 (12)	9 (10)	10 (10)	11 (13)	1 (2)	5 (11)
0-50% seizure reduction	26 (14)	10 (11)	8 (8)	10 (12)	3 (7)	7 (15)
Increased seizure frequency	3 (2)	5 (5)	4 (4)	3 (3)	3 (7)	3 (7)

* Two-year follow-up was missing for three adults and one child, none of whom was seizure free at that time according to later data.
