

Supplementary Figure 1

DNase 1 protection analysis of DmORC binding to ACE-3. Increasing concentrations of DmORC purified from tissue culture nuclear extract (lanes 2-6), 0-12 hour embryo nuclear extract (lanes 7-11), or rDmORC (lanes 12-16) were bound to a radiolabeled fragment containing ACE-3 and subjected to DNase 1 nuclease cleavage followed by DNA sequencing gel analysis Lane 1, no protein.
