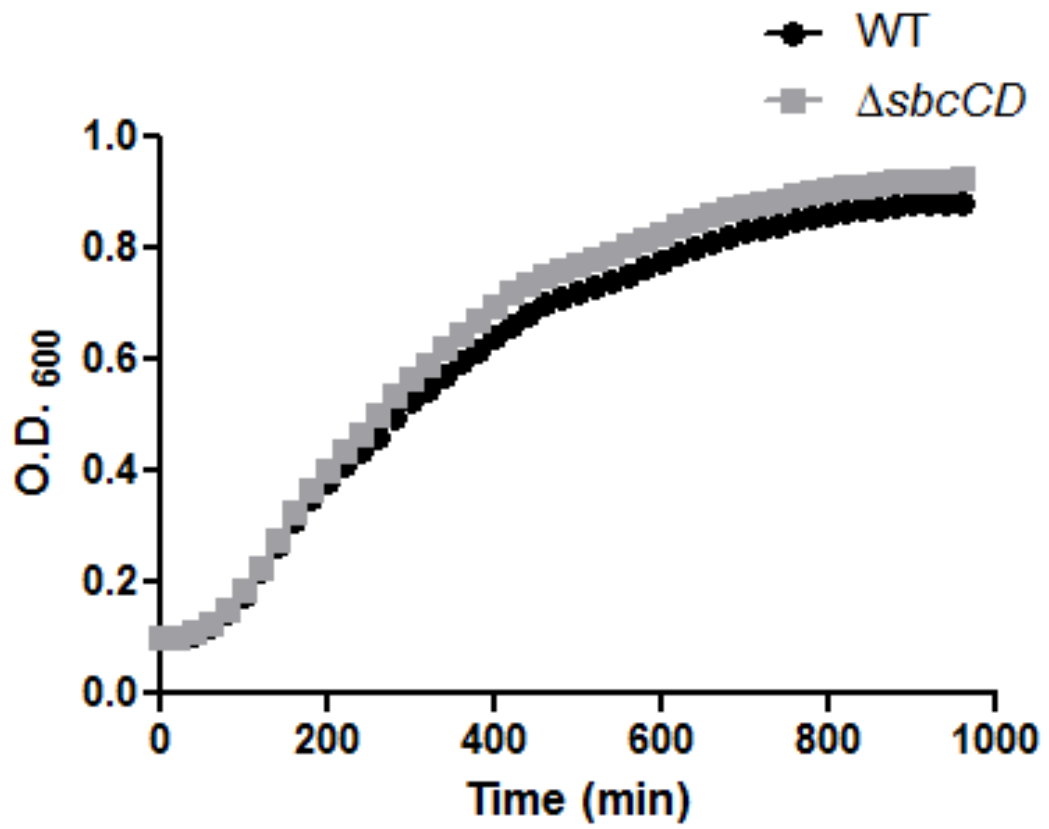

Figure S1. Growth of wild type and $\Delta sbcCD$ mutant in the absence of quinolones. (A) Overnight cultures were adjusted to an optical density at 600 nm [OD_{600}] = 1. Ten fold serial dilutions in saline solution were done and five microliters of each serial dilution were spotted on antibiotic free LB agar plates. (B) Overnight cultures were diluted 1:100 in LB medium and 100 μ l loaded onto a clear 96 well plate. Optical density at 600 nm was monitored for 16 h at 37°C using the BioTek Synergy HT plate reader.
