1 **Appendix 1 (as supplied by the authors):** Calibration of logistic model to predict death
2 risk at 1 year

3
4 This graph presents the calibration, or fit, of the logistic model presented in Table 2
5 (model A). It plots the proportion of people dead within 1 year of hospital admission
6 predicted from the model (vertical axis) against the proportion of people who actually
7 died within 1 year of admission to hospital (horizontal axis).
