

Supplemental Figure S1. Exopolysaccharides decrease H₂O₂ in a concentration dependent way. The amount of H₂O₂ detected by Amplex Red when incubated with 10 μg EPS-I (open squares); 5 μg EPS-II (triangles); or 2.5 μg EPS-I (open inverted triangles). Error bars indicate standard deviation (not visible in all data points due to small error).

Supplemental Figure S2. Exopolysaccharides do not interfere with detection of resorufin fluorescence. The amount of resorufin fluorescence detected when incubated with water, 7 μg EPS-I, or *exoY* culture supernatant. Error bars indicate standard deviation.
