Supplementary Fig. 1. The resolution of 3D image reconstructions after subtomogram average. The resolution was estimated by the Fourier shell correlation at 0.5, and it was 4.4 nm for NC (A) and 4.5 nm for HBB (B).

Supplementary Table 1. Collection of T3SS homologs of the flagellum and injectisome from *Salmonella*, *Shigella*, *Yersinia* and enterohemorrhagic *E. coli* (2).

| | flagellar T3SS | nonflagellar T3SS | | | | |
|---------------------|-------------------------|-------------------------|-------------------------|-------------------------|-------------------------|--------------------------------------|
| | <i>Salmonella</i> | <i>Salmonella</i> | <i>Shigella</i> | <i>Yersinia</i> | <i>E. coli</i> * | |
| function | protein (amino acid) | |
| hook | FlgK (553) | SipD (343) | IpaD (332) | LcrV (324) | EspA (192) | needle tip |
| | | PrgI (80) | MxiH (83) | YscF (87) | EscF (73) | needle |
| | | InvG (562) | MxiD (566) | YscC (607) | EscC (512) | outer membrane ring |
