^aLSMean values were derived from a model comparing atomoxetine-treated subjects with placebo-treated subjects within the diagnostic group.

^bAtomoxetine versus placebo *p* value.

^cADHD + D (atomoxetine) versus dyslexia-only (atomoxetine) *p* value.

^dADHD + D (atomoxetine) versus ADHD-only (atomoxetine) *p* value.

Intra-group *p* values: **p* < 0.05; ***p* < 0.01; ****p* < 0.001; *p* values from *t* tests on LSMean change.

A, atomoxetine; ADHD, attention-deficit/hyperactivity disorder; ADHD + D, attention deficit disorder + dyslexia; K-SCT, Kiddie Sluggish Cognitive Tempo Interview; LSMean, least-squares mean; P, placebo; T_x, treatment.
