

A**B**

Supplementary Figure 3 (A) Representative colony forming assays of 4-HT treated *CAG-CreER; mIno80^{+/+}* and *CAG-CreER; mIno80^{F/F}* MEFs following exposure to 0.2 μ M aphidicolin (APH) or 0.05mM hydroxyurea for 24hrs. Colonies were fixed and stained at 5 days after treatment with HU and APH. **(B)** Quantification of **(A)** from two independent experiments. Error bars represent s.e.m. and asterisks indicate statistically significant differences (* $p < 0.05$, Student's *t*-test).
