<sup>1</sup> Estimated difference between the effect sizes of Treatment A and Treatment B on GUS activity.  
 Estimate<0 indicates Treatment A has a smaller effect on GUS activity than Treatment B. Estimate>0 indicates that Treatment A has a larger effect on GUS activity than Treatment B.

<sup>2</sup> Standard Error for the estimated difference in effect sizes computed by the general linear hypothesis test.

<sup>3</sup> Z statistic For the general linear hypothesis test of the null hypothesis that the expected value of the effect size of Treatment A is equal to the expected value of the effect size of Treatment B.

<sup>4</sup> p-value for the general linear hypothesis test of the null hypothesis that the expected value of the effect size of Treatment A is equal to the expected value of the effect size of Treatment B.
