Supplemental Figure I:

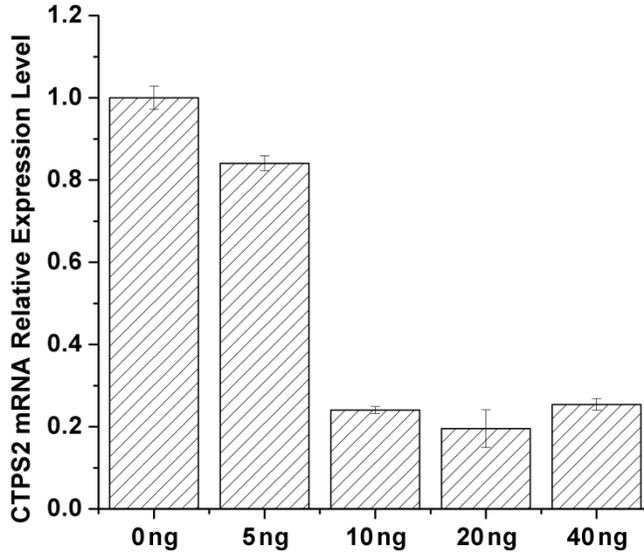

Figure I: CTPS2 mRNA expression in PDGF-BB-treated RASMCs. Unlike CTPS1, CTPS2 was decreased by PDGF-BB.

Supplemental Figure II:

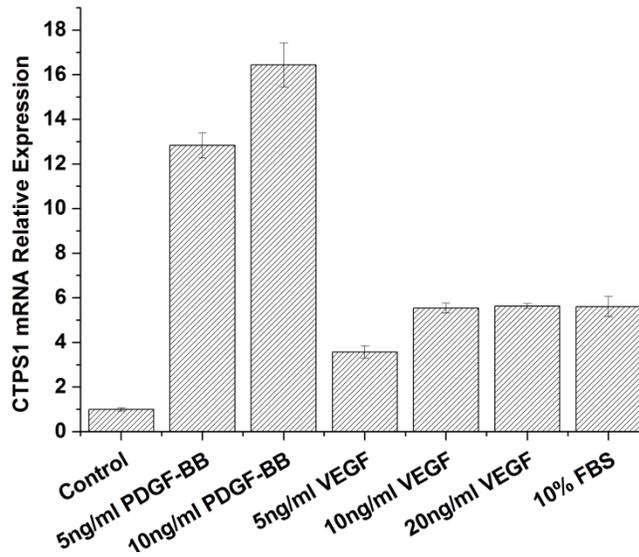

Figure II: CTPS1 expression in proliferating endothelial cells. CTPS1 mRNA was significantly increased in C166 cells when treated with PDGF-BB, VEGF, or 10% FBS.

Supplemental Figure III:

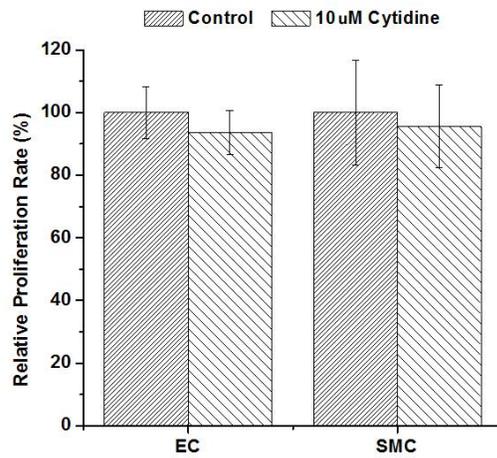

Figure III: Abundant CTP did not accelerate EC or SMC proliferation.

Supplemental Figure IV:

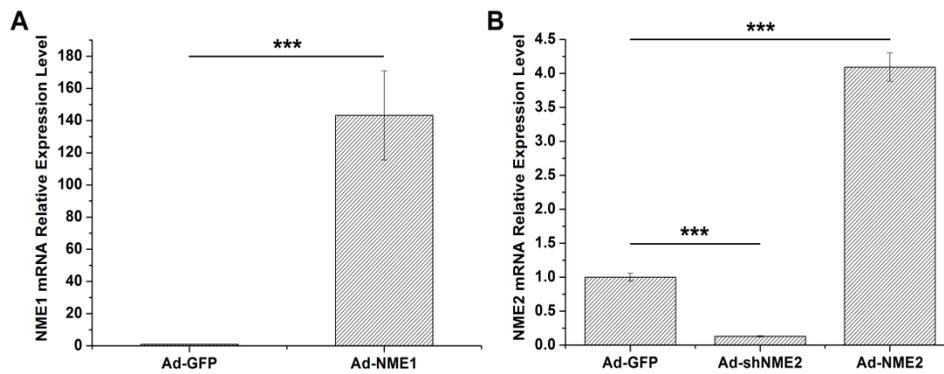

Figure IV: The efficiency of NME1 and NME2 overexpression and shRNA knockdown. (A) NME1 overexpression efficiency was confirmed by qPCR. (B) NME2 overexpression and shRNA knockdown efficiency were confirmed by qPCR. * $P < 0.05$, ** $P < 0.01$, *** $P < 0.001$ (n=3).

Supplemental Figure V:

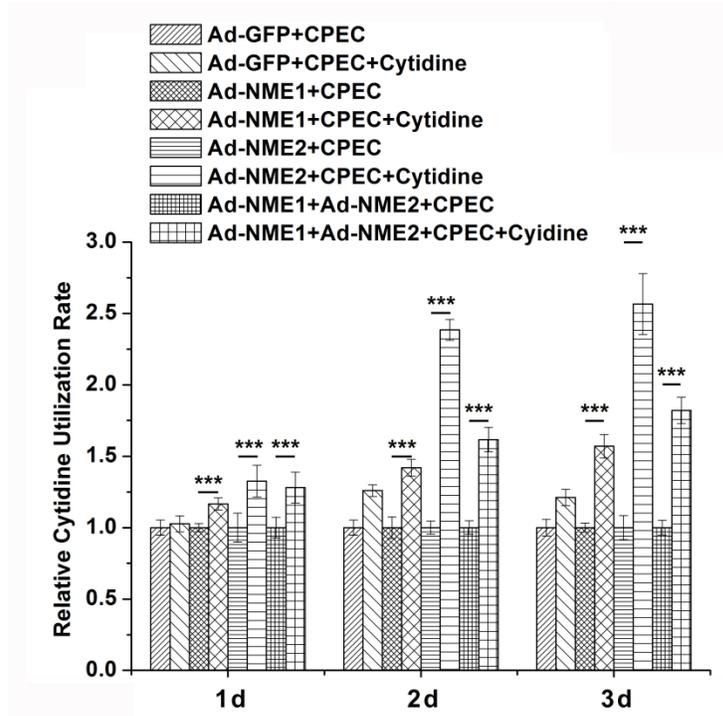

Figure V: NME1 or NME2 overexpression increased the ability of SMCs in utilizing extracellular cytidine for their proliferation. *P<0.05, **P<0.01, ***P<0.001 (n=8).
