

Table S1. Sample size and observed conjugations of the pre-mating experiment. Rates served as base for adjustments for the 'competition' infection experiment.

Isolate no	Homospecific backcross			Heterospecific backcross			Proportions used for adjustment (µl)	
	N	con	prop	N	con	prop		
1	95	14	0.29	120	6	0.10	25/ 75	
2	101	18	0.36	106	11	0.21	21/ 36	
3	82	17	0.41	111	10	0.18	18/ 42	
4	105	3	0.06	117	5	0.09	131/ 88	
5	204	39	0.38	201	94	0.47	-	
6	201	32	0.32	201	40	0.20	-	
7	205	64	0.62	205	128	0.62	-	
8	88	4	0.10	105	18	0.34	82/ 22	
9	106	11	0.21	95	7	0.15	36/ 51	
10	102	15	0.29	123	5	0.08	26/ 92	
11	111	15	0.27	110	9	0.16	28/ 146	
12	102	35	0.69	101	19	0.38	11/ 20	
13	99	21	0.42	0	0	0.00	18/ 19	
14	203	73	0.72	202	66	0.33	-	
15	113	7	0.12	108	6	0.11	61/ 68	
16	103	13	0.25	106	7	0.13	30/ 57	
17	281	93	0.66	610	294	0.32	-	
18	274	95	0.69	452	185	0.41	-	
19	109	17	0.31	96	14	0.29	24/ 26	
20	113	16	0.28	119	12	0.20	26/ 37	
21	336	106	0.63	317	146	0.46	-	
22	108	7	0.13	121	6	0.10	58/ 76	
23	108	8	0.15	101	8	0.16	51/ 47	
24	571	165	0.58	610	292	0.48	-	
25	315	92	0.58	317	140	0.44	-	
C1	92	8	0.17	(Isolate: 1 x 8)				
C2	104	16	0.31	(Isolate: 2 x 9)				
C3	105	25	0.48	(Isolate: 3 x 10)				
C4	116	24	0.41	(Isolate: 4 x 11)				
C5	91	25	0.55	(Isolate: 12 x 19)				
C6	101	33	0.65	(Isolate: 13 x 20)				
C7	91	12	0.26	(Isolate: 15 x 22)				
C8	97	15	0.31	(Isolate: 16 x 23)				

N: observed number of cells per isolate; con: number of observed conjugations per isolate. Composition (in µl) of homospecific isolate/ heterospecific isolate used for inoculum of infection experiment. C1-C8: Control isolates that were tested for conjugation with sporidia from the same meiotic tetrad.
