

**Figure S2** Cloning and expressing characteristics of complete CcFLC mRNA. a: Cloning of complete CDS sequence of CcFLC in hickory. b: Cloning of 3' untranslation region in CcFLC via 3'RACE analysis. c: Hybridization in situ of CcFLC homolog in the pistillate flower bud. SAM: shoot apical meristem; ABP: axillary bud primordium; P: procambium. d: CcFLC homolog expression level during flowering.
