

Supplemental Figure 1. Visible standard reference spectra of AHb1 and AHb2 proteins. UV-Visible spectra of deoxy- (black), oxy- (red), met- (green), and iron-nitrosyl- (blue) AHb1 (A) and AHb2 (B). Spectra were normalized at 700 nm and the 450 - 700 nm visible portion (**inset**) was utilized for least-squares analysis of multi-component spectra.
