

Supplemental Figure

Supplemental Figure 1. Validation of PR antibody (H-190). Lane 1-4: HESCs were transfected with non-target siRNA (siNT) or *PGR* target siRNA (siPR). Forty-eight hours after transfection (defined as day 0), HESCs started treatment with decidualogenic hormones for 3 days. The cells were collected on day 0 and day 3 for protein extraction. Lane 5-7: HESCs were transfected with empty pcDNA3 vector (Ctrl) or PRA vector or PRB vector which were constructed in pcDNA3 vector. 25 µg protein was loaded in each lane for lane 1-5, while 5 µg proteins were loaded each lane for lane 6-7.
