Abbreviations: BMI, body mass index; CI, confidence interval; MV HR, multivariate hazard ratio.

^aWeight (kg)/height (m)².

^bSubjects with missing data on cause of death were not included in cause-specific analyses.

^cAll regression analyses adjusted for age (in the baseline hazard of the Cox regression) and the following covariates: gender, race/ethnicity, education, and leisure-time physical activity (see text Table 3 for definitions).

^dStatistical significance of the linear trend in BMI categories, evaluated using BMI category medians.

^eAverage BMI was calculated as the weighted average of BMIs at 18, 35, and 50 years of age.

Abbreviations: BMI, body mass index; CI, confidence interval; MV HR, multivariate hazard ratio.

^aWeight (kg)/height (m)².

^bAll regression analyses adjusted for age (in the baseline hazard of the Cox regression) and the following covariates: gender, race/ethnicity, education, physical activity, alcohol consumption, and height (see text Tables 3 and 4 for definitions). The analyses did not include subjects with an initial BMI less than 18.5.

^cStatistical significance of the linear trend in weight-gain categories, evaluated using weight-gain category medians.
