

Supplemental Fig. 3. Representative CXCR3 and CLA staining in CD8⁺ CD45RO⁺ tetramer-negative cell populations. Representative flow cytometry from patient vaccinated without GM-CSF (Panel A; matched to Fig. 1 Panel A) or with GM-CSF (Panel B; matched to Fig.1 Panel C). Addition of GM-CSF had no significant ($p > 0.05$) effect on CXCR3 or CLA expression in non antigen-specific CD8 populations. Representative data following a single vaccination; similar data were observed following multiple vaccinations (not shown).
