

Figure legends for Supplemental data

Figure S1. Cx43, integrin $\alpha 5$ and 14-3-3 θ are mostly not colocalized with TGN38.

MLO-Y4 cells were subjected to FFSS (FF) (16 dynes/cm²) or non-FFSS (C) for 2 hr. Cells were fixed and dual-immunostained with antibodies against Cx43 and TGN38 (**A**), $\alpha 5$ and TGN38 (**B**) or 14-3-3 θ and $\alpha 5$ (**C**). The overlaps were shown in merged image (merged).

Fig. S1
