

Aberrant chimeric RNA *GOLM1-MAK10* encoding a secreted fusion protein as a molecular signature for human esophageal squamous cell carcinoma - Zhang et al

Supplementary Figure 1: Androgen treatment upregulates the expression of *GOLM1-MAK10* RNA. Two ESCC cell lines, EC9706 and EC109, were treated with R1881 for various durations followed by RT-PCR assay. β -actin was used as the internal control. Upregulated as early as 12 h following R1881 treatment.
