Additional file 12: Figure S3 - Stable QTLs for seven seed and berry-related traits in the grapevine mapping population MTP3346 (consensus map). The confidence intervals (CIs) shown are for the inter-year BLUPs of the traits for which a QTL overlapping with this CI was also found in at least two different years. Distances are in Kosambi cM. Seed-related traits are in brown. MSN: mean seed number; %SDM: seed dry matter percentage.
