

Supplementary figure 2 *Expression of ApoB partner genes in murine liver 8 weeks p.i. Total RNA was isolated from snap-frozen liver tissues and qRT-PCR was performed with A1cf-, Abca1-, ApoA1-, ApoA2-, ApoA4-, ApoA5-, Apobec2-, ApoE-, ApoM-, Bgn-, CD320-, Fgr-, Ldl-r, Lpl-, Mtp-, Pcsk9-, Plk1-, Txn1- and actin-specific primers. mRNA levels were calculated relative to actin mRNA. Expression levels in the PBS group were set as 100%. Data are represented as individual measurements with mean values \pm SE plotted.*
