

SUPPLEMENTARY FIG. S2. Impacts of the GPX mimic on intracellular ROS status and thiol-containing enzyme functions in islets of the WT and GKO mice. ROS status (A), LDH activity (B), and GSR activity (C). Values are means \pm SEM (n = 3). Means without sharing a common letter a, b, and c are different ($p < 0.01$) in (A). GPX, glutathione peroxidase; GSR, glutathione reductase; LDH, lactate dehydrogenase; and ROS, reactive oxygen species.
