

TABLE S1. Strain distribution for each of the studied species of *Nocardia*.

Species (Strain no.)	Spanish provinces (no.)	Clinical origins of the samples
<i>N. abscessus</i> (n=29)	18	24 respiratory system (13 sputum, 3 bronchial alveolar lavage, 6 bronchial alveolar aspirate, 1 nasal aspirate, 1 tracheal aspirate) 2 central nervous system, 2 blood, 1 cutaneous
<i>N. cyriacigeorgica</i> (n=30)	16	24 respiratory system (10 bronchial alveolar aspirates, 8 sputum samples, 4 bronchial alveolar lavages, 1 tracheal aspirate, and 1 pleural fluid sample), 2 central nervous system, 2 genital, 2 blood
<i>N. farcinica</i> (n=31)	18	22 respiratory system (13 sputum, 7 pulmonary abscess, 1 bronchial alveolar lavage, and 1 bronchial alveolar aspirate) 4 skin, 3 central nervous system and 2 blood
<i>N. nova</i> (n=29)	10	26 respiratory system (19 sputum, 4 bronchial alveolar aspirates, 2 pleural fluid and 1 tracheal aspirate) 1 skin and 2 internal tissues

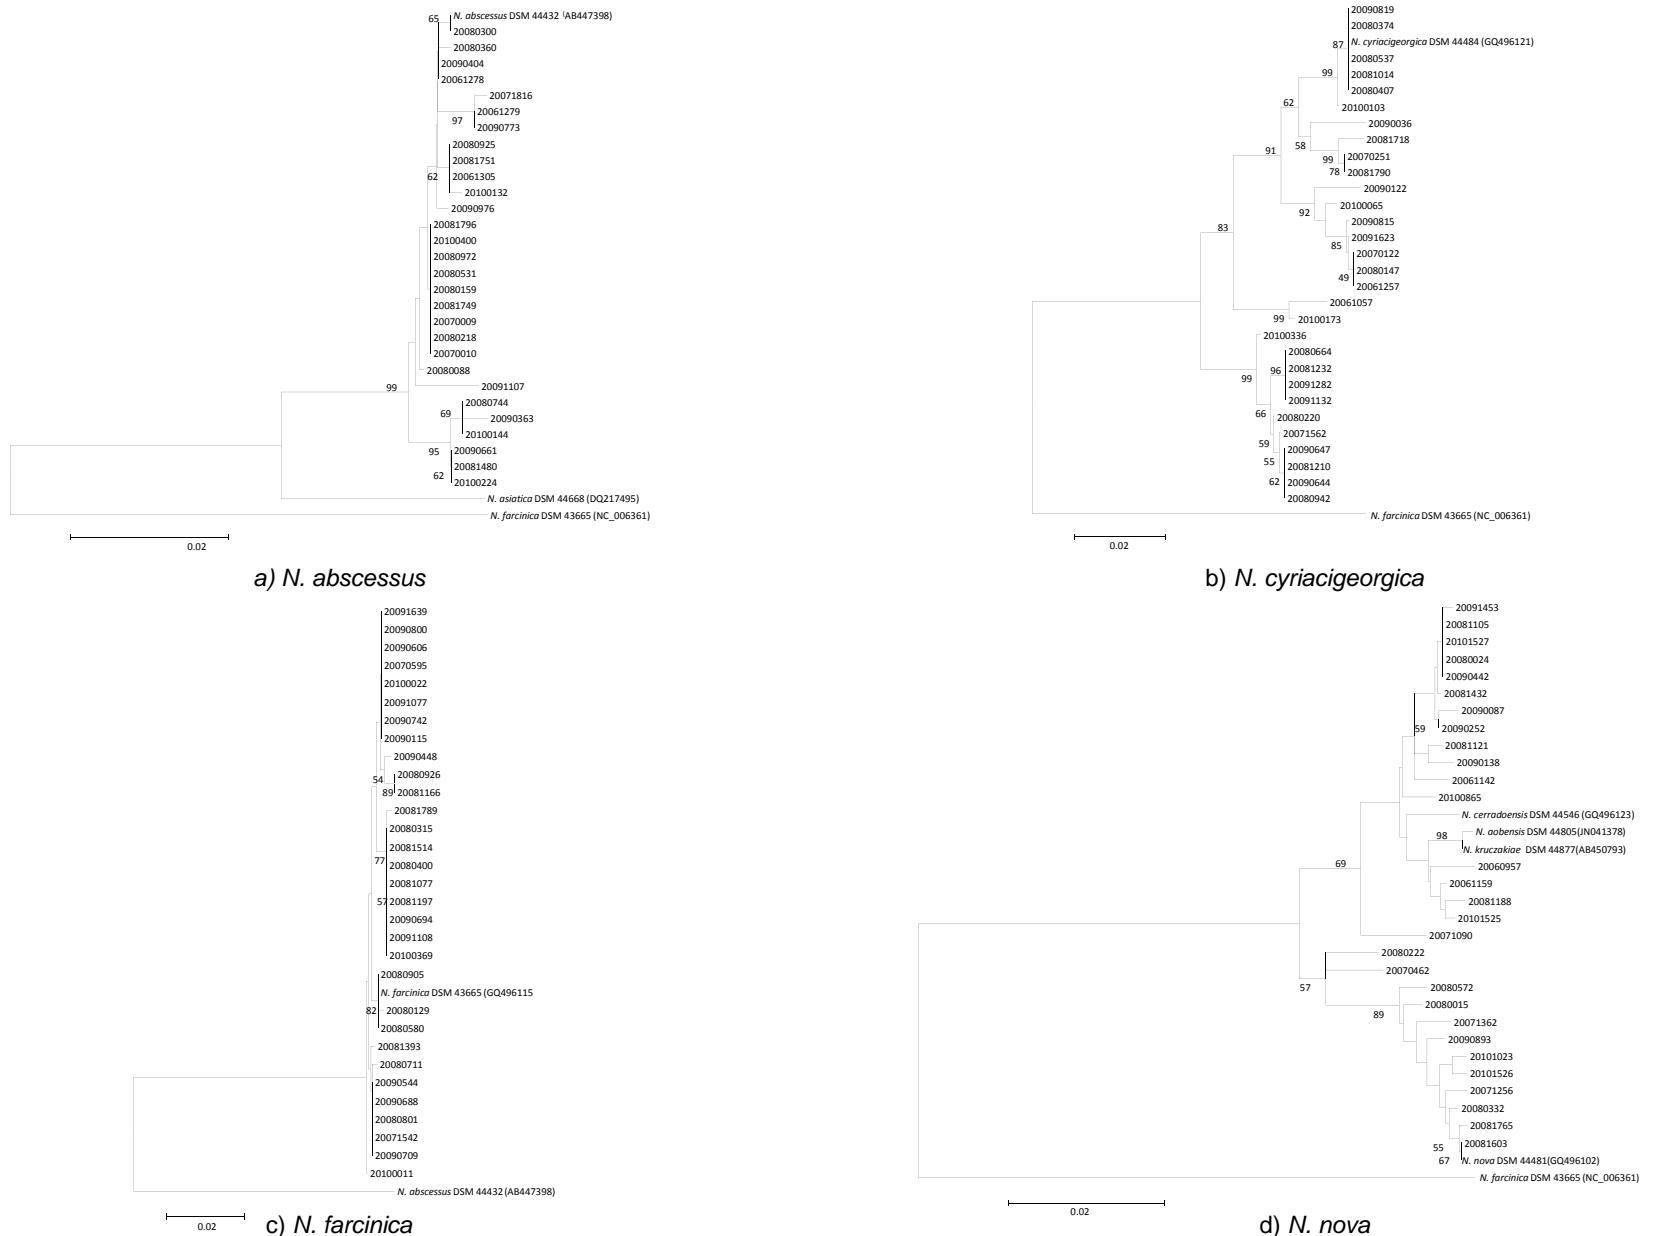

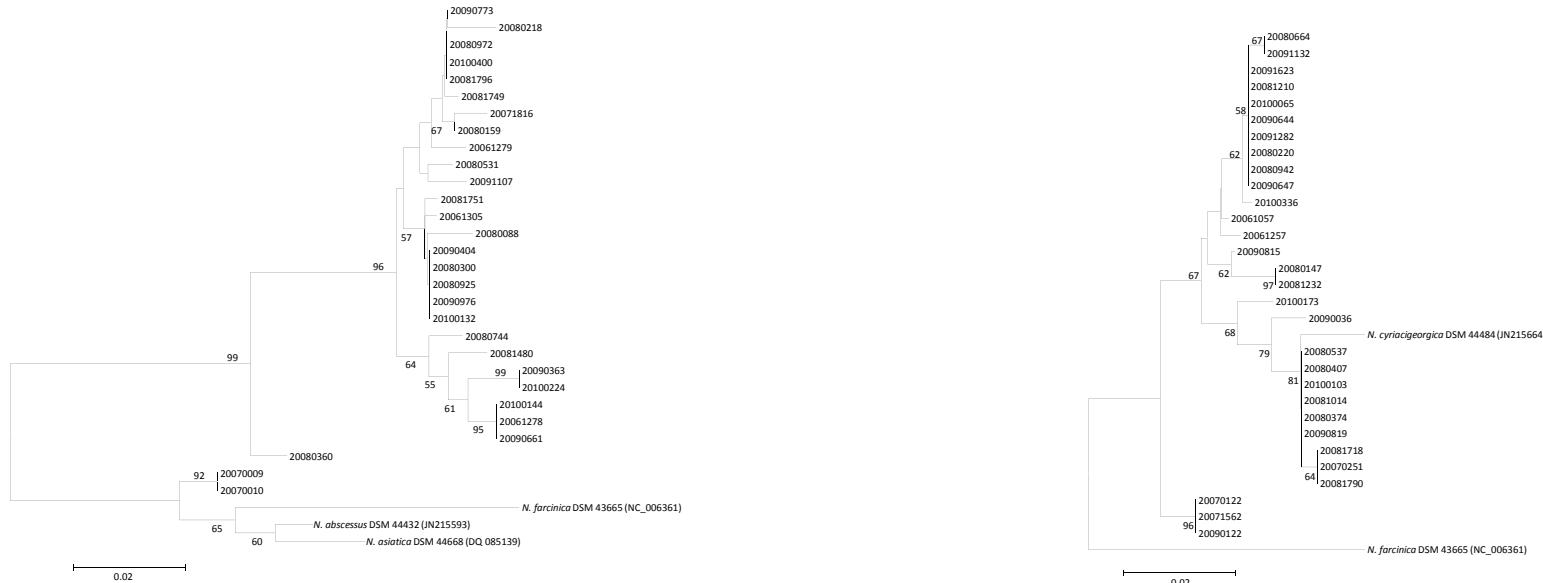

FIG. S1. Phylogenetic trees according to neighbor-joining methods based on *gyrB* gene of *Nocardia* spp. four more prevalent species in Spain. Bootstrap values are expressed as a percentage of 1,000 replications. The scale bar represents 0.02 substitutions per nucleotide position. *N. farcinica* DSM 43665 is used as outgroup, except in case of *N. farcinica* analysis when it is substituted by *N. abscessus* DSM 43665.

a) *N. abscessus*

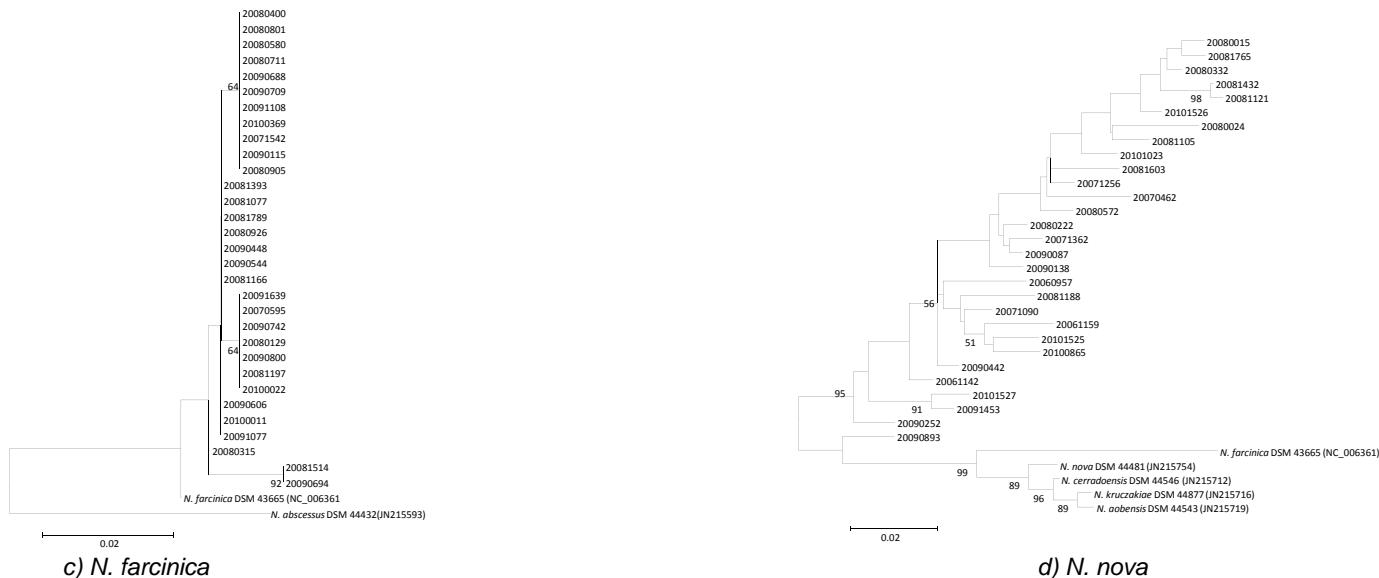

FIG. S2. Phylogenetic trees according to neighbor-joining methods based on *rpoB* gene of *Nocardia* spp. four more prevalent species in Spain. Bootstrap values are expressed as a percentage of 1,000 replications. The scale bar represents 0.02 substitutions per nucleotide position. *N. farcinica* DSM 43665 is used as outgroup, except in case of *N. farcinica* analysis when it is substituted by *N. abscessus* DSM 44432.

FIG. S3. Polymorphisms in the different GyrB-types found in the *N. nova* population (n=29).

Strain ID ^{1,2}	Position ³										Similarity Identity (%) ^{4,5}	GenBank acc. no.
