

Supplemental Figure 1. Ohtsuru et al

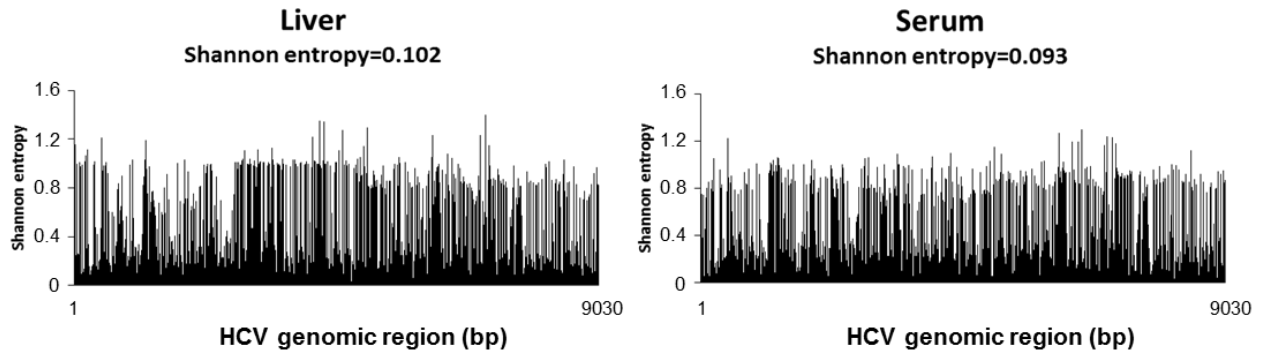

Supplemental Figure 1. Comparison of the mean Shannon entropy values for HCV genome between the liver and serum of the same individual.

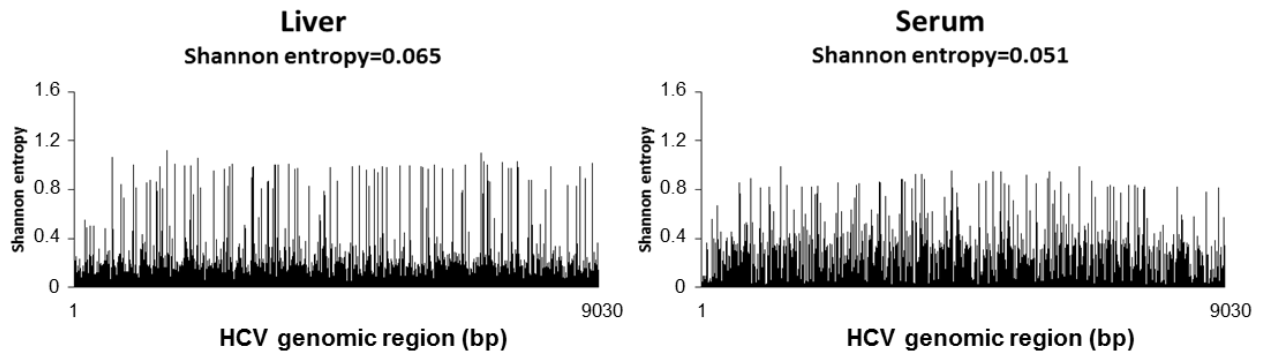

Mean Shannon entropy values for the overall HCV genome of the liver (black bars) and serum (white bars) in 4 patients are shown. Error bars represent the standard deviation.

Supplemental Figure 2. Ohtsuru et al

Patient #2

Patient #3

Supplemental Figure 2. Comparison of viral complexity between the liver and serum of the same individual.

Shannon entropy values throughout the whole viral genome in the liver and serum of the two representative cases (patients #2 and #3) are shown.
