

Supplementary Figure 3. *Act1*^{-/-} B cells respond more vigorously to CD40-ligation. Magnetically purified splenic B cells from control BALB/c or *Act1*^{-/-} mice were grown in RPMI in the presence or absence of 10 μ g/ml anti-CD40 Ab (BD Biosciences). Shown are representative FSC/SSC FACS plots at day 0, day 3, and day 5; circles indicate the appearance of proliferating blast-like cells.
