Data are provided on the WHO code, source (vector or host), geographical location and coordinates, date of isolation and sequence data for each strain used; these are referred to as the CUK strains (1-12) throughout. Accession numbers are for the sequence read data in the European Nucleotide Archive (ENA). Data for all 12 isolates can be obtained via study ERP000588 (<http://www.ebi.ac.uk/ena/data/view/ERP000588>).
