

Supplementary Figure S1 Array-CGH-based X chromosome mosaicism scale. The X chromosome log ratio profile vertical right shift of the mosaicism artificial scale representing 10, 30, 50 and 75% of 46,XX cell line is shown to the left of each panel (green). TS patients mosaicism level was estimated by the overlapping every TS X chromosome array profile (red) to the artificial scale (green) as shown to the right of each panel.
