

**Supplementary Figure 3. Fer kinase downregulation promotes accumulation of  $\alpha_6$ -integrin in endosomal vesicles.**

MDA-MB-231 cells were transfected with the indicated siRNAs and plated on laminin-coated glass coverslips 72 h later. Cells were processed for immunofluorescence microscopy after 24 h using anti- $\alpha_6$  integrin and anti-early endosome antigen 1 (EEA1) antibodies. Scale bar = 20  $\mu$ m. The results shown are representative of three independent experiments.
