

Supplemental Fig 1

- E2

+ E2

Supplemental Fig.1.

Silastic tubing containing oil or E2 was implanted into ovariectomized female mice. After 7 days the animals were sacrificed, uteri were removed, and uterine extracts were prepared. A representative image from oil- and E2-treated animals demonstrates that E2 has a profound effect on uterine size. The uteri from mice that had been treated with E2 were dramatically larger than uteri from mice that had been treated with oil.
