

Assays for determining heparan sulfate and heparin *O*-sulfotransferase activity and specificity

Eric Sterner, Lingyun Li, Priscilla Paul, Julie Beaudet, Jian Liu, Robert J. Linhardt, and Jonathan S. Dordick

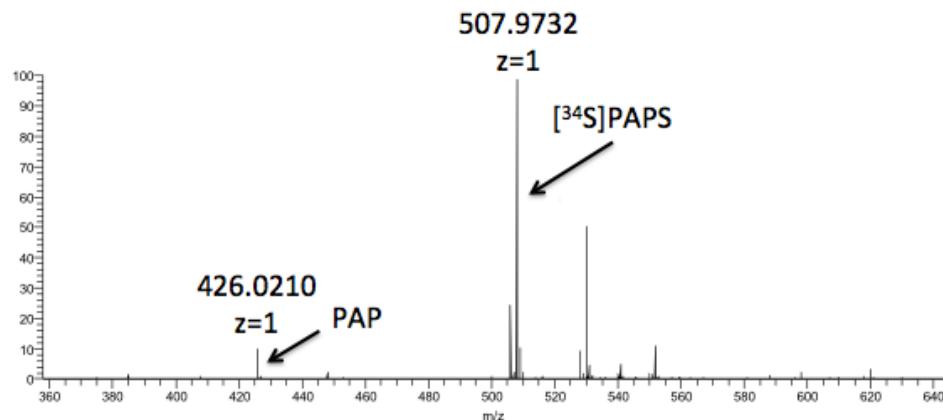

Fig. S1. [^{34}S]PAPS product mass spectrum

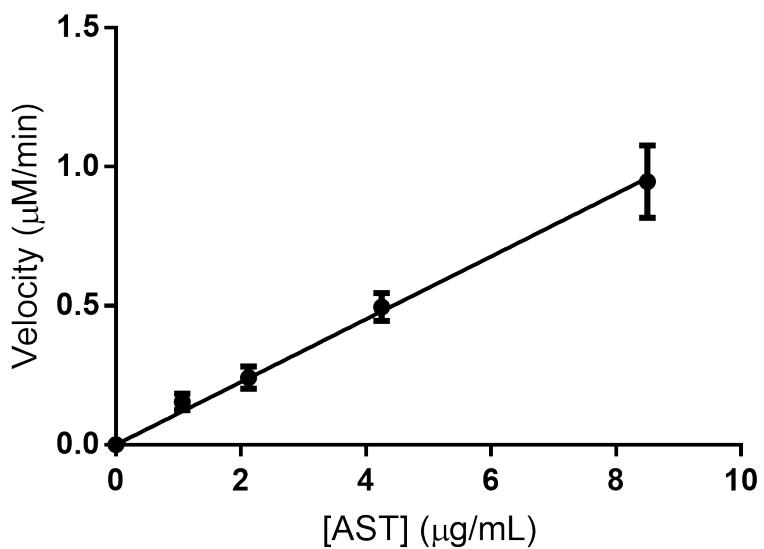

Fig. S2. (A) Linearity of AST-IV initial reaction rate as a function of AST-IV concentration at a $[\text{PAP}] = 100 \mu\text{M}$

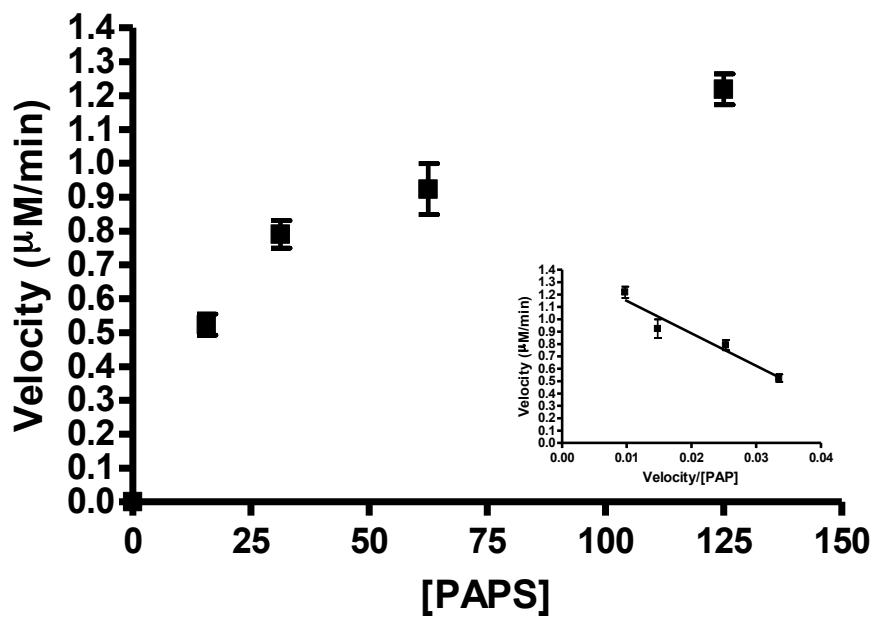

Fig. S2. (B) Michaelis-Menten and Eadie-Hofstee (Inset) plots for AST-IV

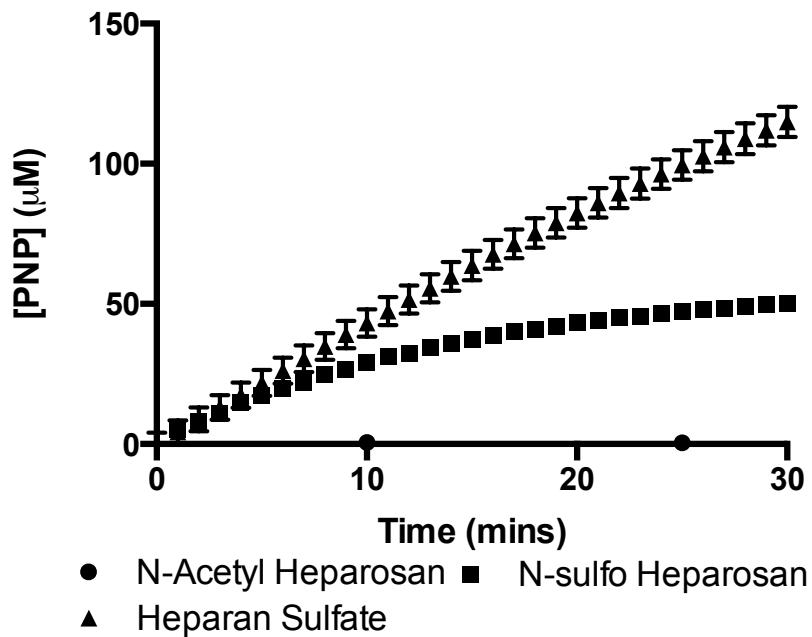

Fig. S3. Comparison of the time course of 6OST-3 on heparan sulfate, *N*-sulfoheparosan, and *N*-acetylheparosan

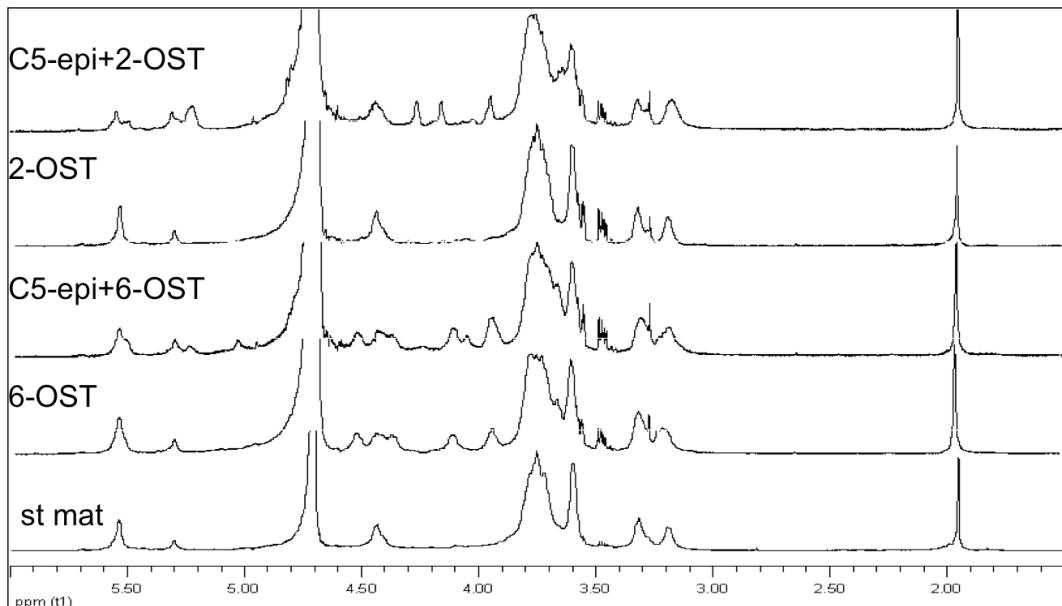

Fig. S4. (A) ^1H -nuclear magnetic resonance spectroscopy of *N*-sulfoheparosan under variable conditions: (1) Addition of C₅-epi and 2OST; (2) Only 2OST added; (3) Addition of C₅-epi and 6OST-3; (4) Only 6OST-3 added; (5) *N*-sulfoheparosan starting material

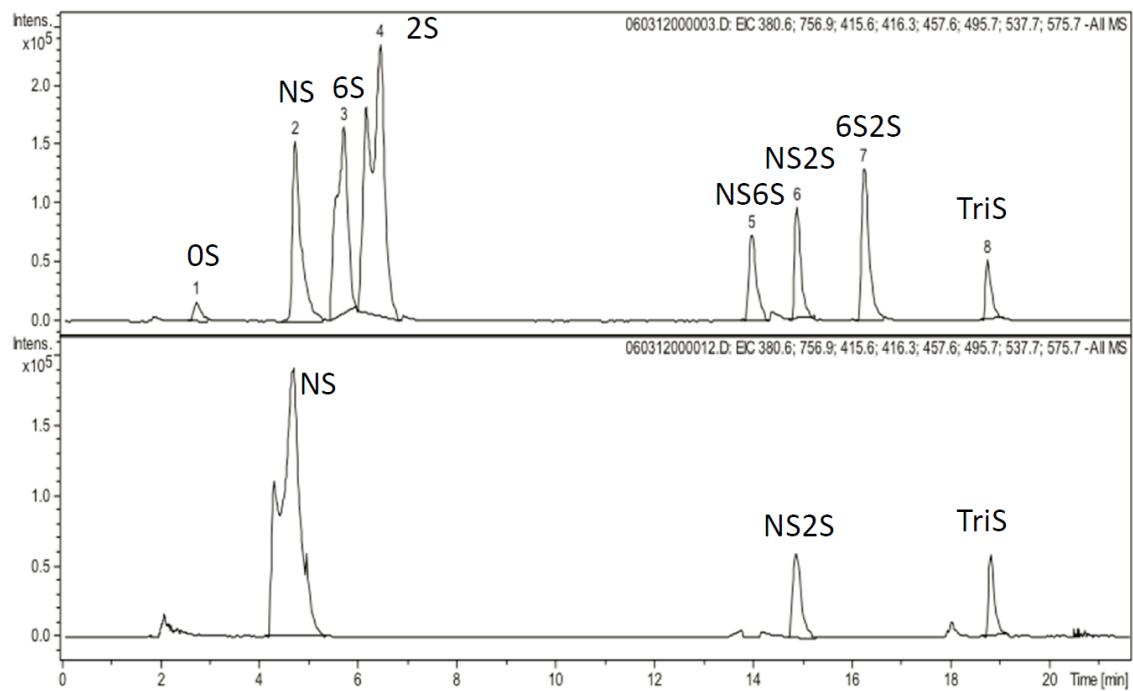

Fig. S4. (B) Liquid Chromatography Total Ion Chromatogram: (Top) Heparin standard; (Bottom) 6OST-3 reaction on partially 2-*O* sulfonated *N*-sulfoheparosan. OS, Δ UA-GlcNAc; NS, Δ UA-GlcNS; 6S, Δ UA-GlcNAc6S; 2S, Δ UA2S-GlcNAc; 2SNS, Δ UA2S-GlcNS; NS6S, Δ UA-GlcNS6S; 2S6S, Δ UA2SGlcNAc6S; and TriS, Δ UA2S-GlcNS6S

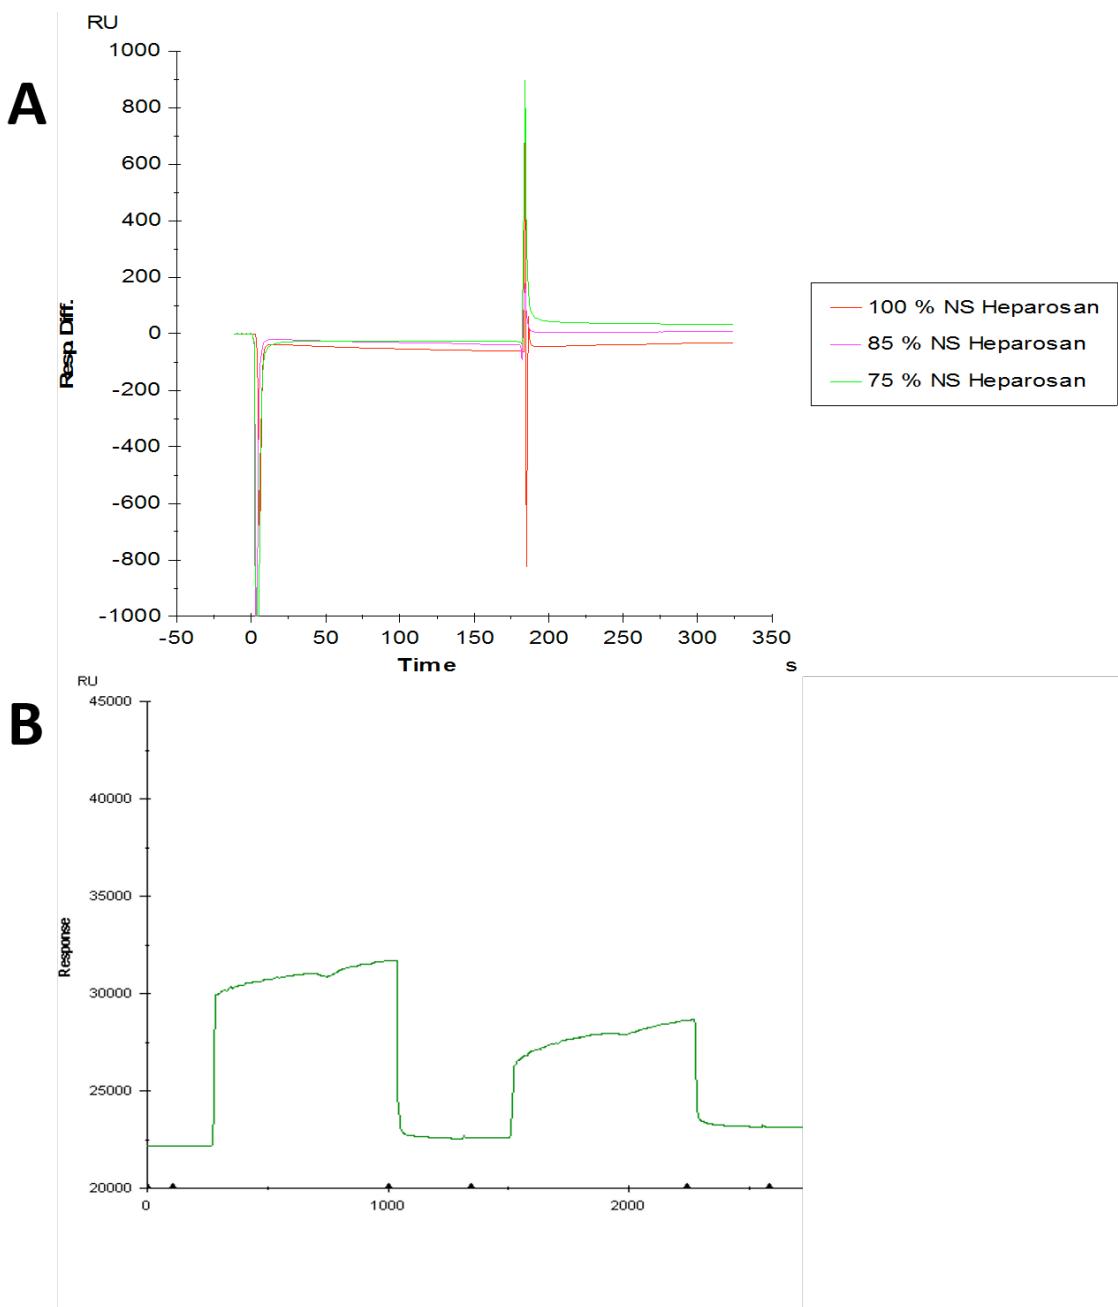

Fig. S5. Surface Plasmon Resonance (SPR) of 6OST-3 and N-sulfoheparosan. A. 6OST-3, in the absence of PAPS, was passed over an SPR chip with N-sulfoheparosan (of varying %NS content) immobilized on the surface. Based on the SPR spectrum, no binding of 6OST-3 was observed in the absence of PAPS. B. 6OST-3, in the presence of PAPS was passed over an SPR chip with N-sulfoheparosan (75 % NS heparosan)

Fig. S6. 6-OST-3 Sequence comparison, (NCBI Reference Sequence: NP_056635.2) The two sequences show an 81% sequence homology with the commercial enzyme possessing an inserted region from aa 28-110
