

ANS emission maxima after transfer from 120 μM HEWL

ANS emission maxima after transfer from 40 μM HEWL

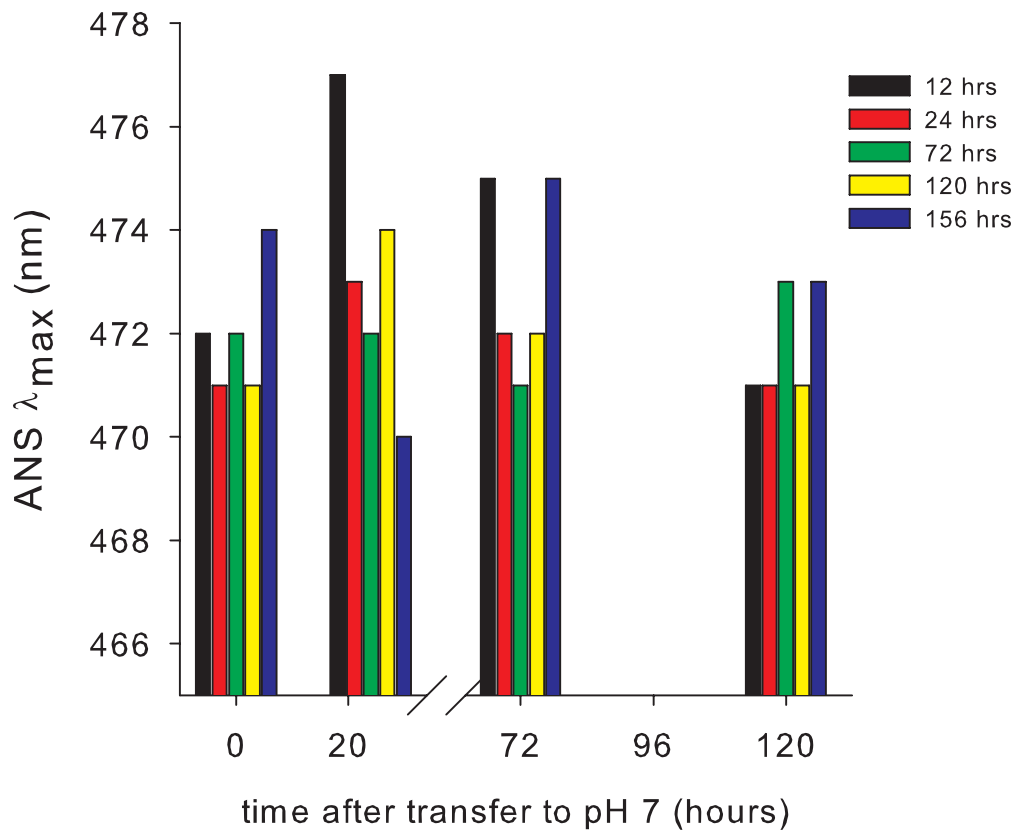

Figure S6: Emission maxima of ANS in presence of HEWL nanoparticles transferred to pH 7. The variation in emission maxima of ANS in presence of HEWL nanoparticles with time after 10-fold dilution to pH 7 from 120 (Fig. 4c) or 40 (Fig. 4d) μM samples.
