

Supplemental figure 2. Fbxl12/CaMKI-dependent localization of p27T157. (A-D) A549 cells transfected with LacZ, CaMKI and FBXL12 were synchronized by serum starvation and then released by addition of 10% FBS followed by fixation and processing for immunostaining using p-CaMKI and p27T157 antibodies at indicated times. DAPI was used to visualize the nuclei. Scale bar, 10 μ m.
