

**Supplemental figure 3. Fbxl12/CaMKI-dependent localization of p27T198.** (A-D) A549 cells transfected with LacZ, CaMKI and Fbxl12 were synchronized by serum starvation and then released by addition of 10% FBS followed by fixation and processing for immunostaining using p-CaMKI and p27T198 antibodies at indicated times. DAPI was used to visualize the nuclei. Scale bar, 10  $\mu$ m.
