Supp. S4 Localization of Py-ICP in the midgut.

Supp. Figure S5. ICP localizes to the interior of early liver stage but is released during late liver stage *in vitro*.

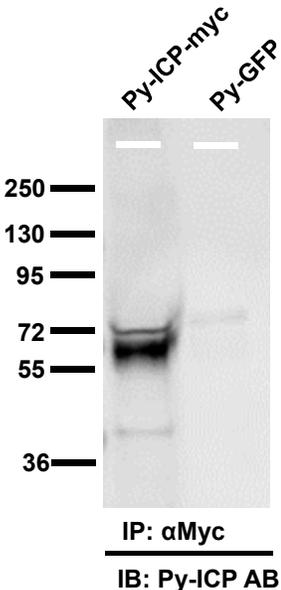

Supp. Figure S6. *P. yoelii* ICP is essential in blood stage

Supp. Figure S7. Western blot analysis on ICP pull down experiments

A

B

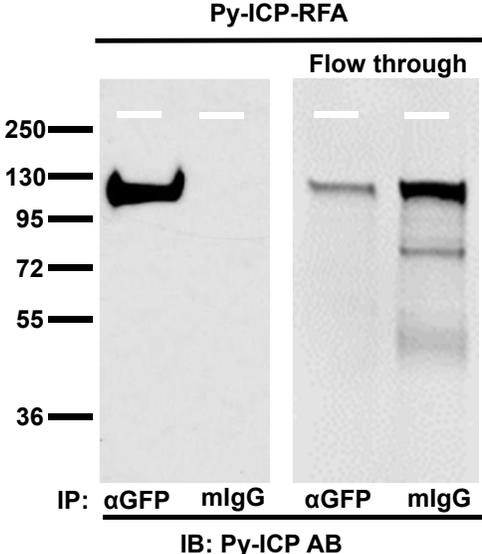

Table S1. Co-immunoprecipitation experiments.

Five independent co-immunoprecipitation experiments were performed using different parasite lines probed with different antibodies. Proteins observed in any of the four negative controls were discounted.

Pull down experiment (parasite line/antibody probe)	Negative controls (parasite line/antibody probe)
Py-ICP-myc / myc (two independent experiments)	Py GFP / myc Py WT / GFP
Py-ICP-RFA / GFP (three independent experiments)	Py-ICP-RFA / mouse IgG Py GFP / GFP
