

**FIG S1 Evolutionary pathway of the drug resistance-conferring mutations in *pfdhfr* and *pfdhps* genes in southern China.** The network diagram shows the evolution of the drug resistant *pfdhfr* (A) and *pfdhps* (B) alleles with respect to the site-mutations in the genes. The size of the circle is proportional to the number of isolates with a particular allele. The lines represent evolutional steps connecting individual SNP haplotypes shown in different colors.
